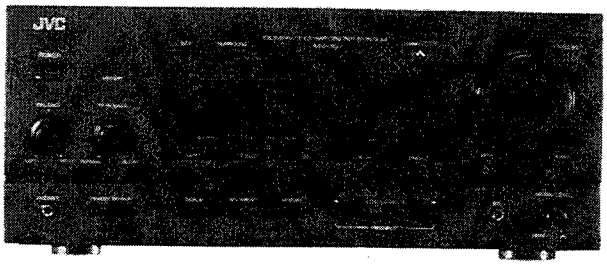
COMPACT COMPONENT SYSTEM

DX-MX70BK

MODEL No. **CA-MX70BK**

(UNIT No. AX-MX70BK)



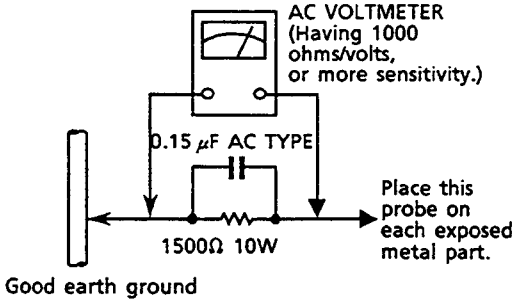
* Refer to the CA-MX70BK (S.M. No. 20243) or DX-MX70BK (S.M. No. 20249) as instruction manual.

Contents

No. 20244
Mar. 1991

Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (⚠) on the Parts List in the Service Manual. The use of a substitute repalcement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.
5. Leakage currnet check (Electrical shock hazard testing)
   After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, contorl shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.
   Do not use a line isolation transformer during this check.
   - Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).
   - Alternate check method
     Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500Ω 10 W resistor paralleled by a 0.15 μF AC-type capacitor between an exposed metal part and a known good earth ground.
     Measure the AC voltage across the resistor with the AC voltmeter.
     Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and meausre the AC voltage across the resistor.
     Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).



Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

Air-cooling Fan

(1) Outline:
By using an air blower with a motor in the AX-MX70BK, the heat sink has been made smaller and high power has been achieved in a compact format. The air blower rotates with a 2-step speed acording to the music signal level. The rise of the temperature in the heat sink is detected by a thermistor, and if the temperature becomes abnormal, the speaker relay is turned OFF.

(2) Operation principle:
The music signal level detected by the A/D converter (IC093) is input to the microcomputer, and the fan motor is driven with a 2-step speed according to that signal level. The temperature of the heat sink is detected by the resistance value of the thermistor (SR041), and is input to the A/D converter (IC093).

(3) Fan operation (standard value)
① When the speaker output continues for more than 1 minute (continuously more than 4 V or at a music peak above 10 V), the rotation speed is lowered.
② When the condition of ① continues for more than 15 minutes, the rotation speed is raised.
③ When the signal detection is turned OFF while the fan is rotating, the fan will be stopped after 1 minute.
④ When condition ② continues, the rotation is stopped for 2 minutes after 30 minutes and, thereafter, high speed rotation will continue.

(4) Abnormal rise is tempeature (standard value)
When the temperature of the heat sink is higher than 125°C for more than a minute, the speaker relay is turned OFF.

Check of Fan Motor Rotation

① Short-circuit of W049 and GND → Low speed rotation
② Short-circuit of W050 and GND → High speed rotation

Disassembly Procedures

(1) Removing the top cover

1. Remove the screw on each side and the 4 screws on the rear.
2. Pull the top cover slightly backward and lift it while spreading the backs of the left and right sides to remove it.

(2) Removing the Front panel

1. Remove the top cover.
2. Remove the 5 screws under the front panel

(3) Confirming the Main P.C. board

1. Remove the top cover.
2. Remove the 6 screws ①②③fastening the main P.C.board and heat sink bracket.(Fig.1)
3. Remove the screw ⑤ fastening the rear side.(Fig.2)
4. Confirm the main P.C. board as shown in the Fig .3

(4) Removing the Heat Sink.

1. Remove the top cover.
2. Remove the 2 screws ② fastening the heat sink.
3. Remove the 4 screws ③④fastening the heat sink bracket.
4. Pull out the heat sink Ass'y from main P.C. board.

SERVICE MANUAL

MODEL No. CA-MX70BK / DX-MX70BK

(Unit No. TD-MX70BK)

* For instruction manual , please refer to the CA-MX70BK(SM.No.20243) or DX-MX70BK(SM.No.20249).
* AX-MX70BK is needed for power supply etc when servicing.

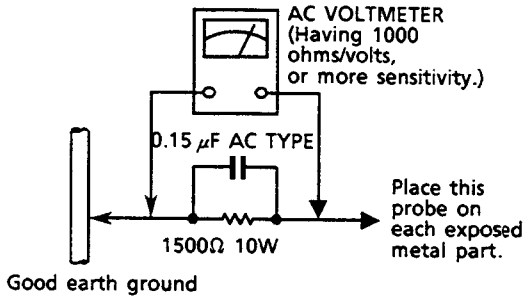
Contents

650

No. 20246
Mar. 1991

Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (⚠) on the Parts List in the Service Manual. The use of a substitute repalcement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.
5. Leakage currnet check (Electrical shock hazard testing)
   After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, contorl shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.
   Do not use a line isolation transformer during this check.
   - Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularily any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).
   - Alternate check method
     Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500Ω 10 W resistor paralleled by a 0.15 μF AC-type capacitor between an exposed metal part and a known good earth ground.
     Measure the AC voltage across the resistor with the AC voltmeter.
     Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and meausre the AC voltage across the resistor.
     Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).



Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

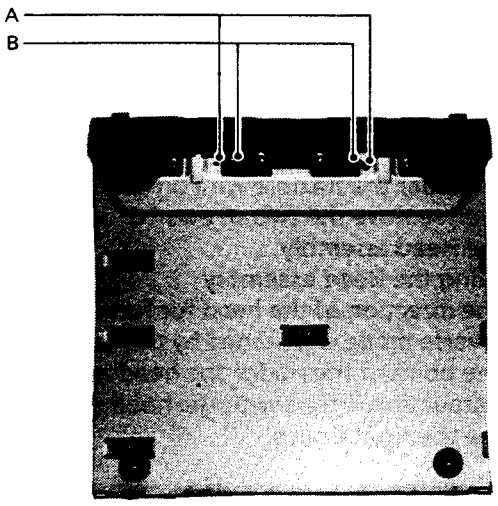
Disassembly Procedures

1. Removing the Top Cover

(1). Remove 2 screws on both sides of the metal cover.
(2). Remove 4 screws located on the rear panel.
(3). Slightly open both sides of the metal cover to the left and right, and raise the rear side . Then slowly lift it up and streight backward.



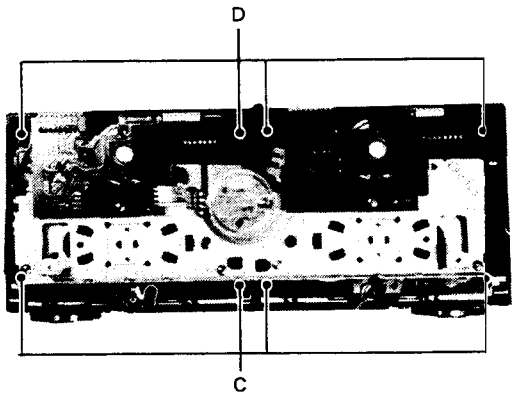
2. Removing the Front Panel assembly

(1). Remove the 2 screws "A" fixing the front panel from the bottom,then the 2 screws "B" fixing the mechanism.
(2). Remove all connectors from the front pannel.

3. Removing the Cassette Mechanism

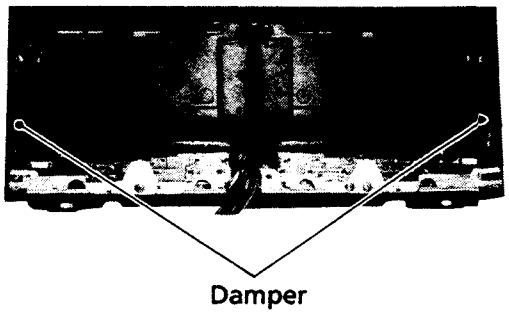
(1). Remove the 8 screws "C","D" fixing the cassette mechanism.
Reference : The screw "C" is a doublethread screw for plastics.
The screw "D" is a tap tight screw for chassis.
(2). Push the EJECT button , then remove the cassette mechanism assembly.

Note : The cassette mechanism is grounded through the bottom cover, so when checking the operations with the bottom cover removed (especially when checking the signal system), be sure to ground the chassis by using an alligator clip or other suitable gadget.Also, as this cassette mechanism is designed for pack sensing, remember that it cannot be operated without any tape.



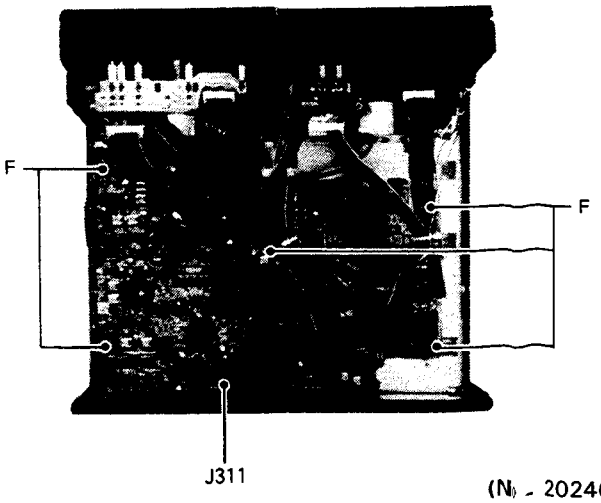
4. Removing the Cassette Holder

(1). Remove the gear oil damper fixing with a double-thread screw "E".
(2). Remove the Holder Spring from the bracket.
(3). Remove the Cassette Holder from the Holder Bracket.



5. Removing the Cassette Deck Main P.C.B

(1). Remove the top cover and front panel.
(2). Remove the 5 screws "F" fixing the Cassette Deck Main P.C.B.
(3). Unsolder the defective connector J311.



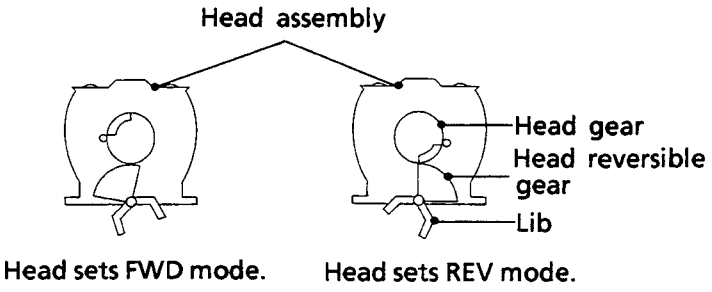
6. Removing the Cassette Mechanism Units

■ Head assembly

1. Unsolder the flexible wire on P.C.Board, then remove the two screws "G" installing the Head assembly.

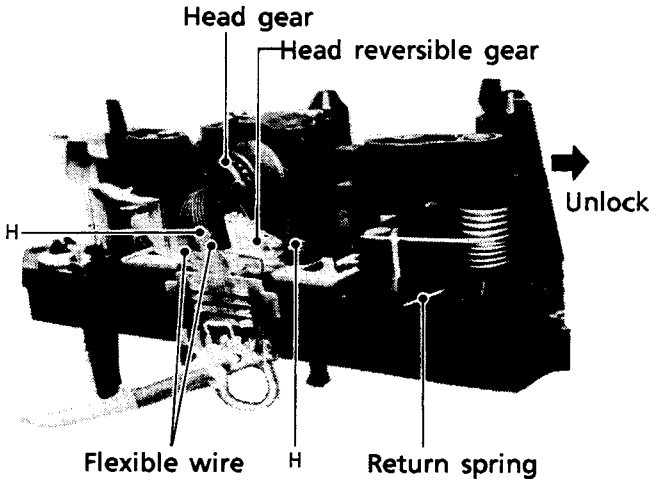
Installing the Head assembly

1. The direction of the head for forward or reverse mode is switched by the cam gear.
2. The point of the rib for the head assembly installation differs with the head direction.
3. See the right figure.



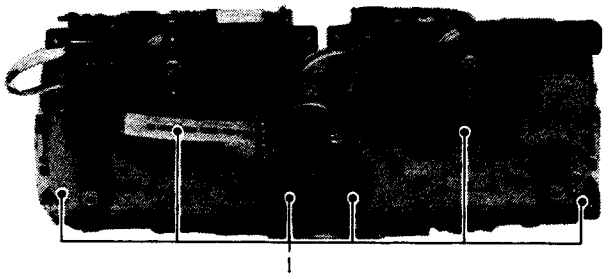
■ Pinch Roller Arm assembly

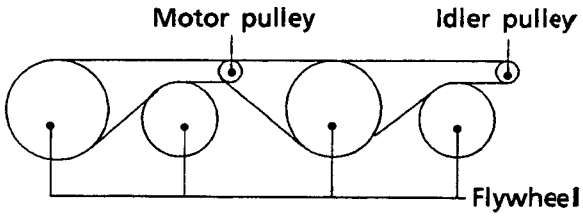
1. Detach the Pinch Roller Return Spring (small outside spring) from the hook.
2. Remove the pawl fixing the Pinch Roller Arm assembly.



■ FM Bracket and Flywheel

1. Remove the 6 screws "H" fixing the FM Bracket.
2. Unsolder the reel motor from reel motor P.C.B.
3. Remove the pawl fixing the FM Bracket and Cassette Mechanism assembly.
4. Remove the belt. Fit the belt by the method shown in figure.
5. Detach the Flywheel.(The washer can be removed in the direction of the Pinch Roller)





■ Leaf Switch P.C.B

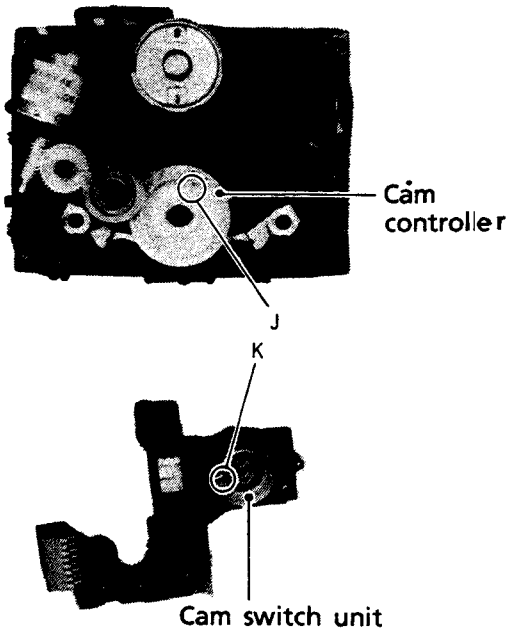
1. Remove the pawl fixing the Leaf Switch P.C.B.

■ CAM Switch P.C.B

1. Remove the FM Bracket and Flywheel.
2. Remove the pawl fixing the Sensor P.C.B.

■ CAM Motor

1. Remove the Cassette Mechanism assembly on FM Bracket.
2. Remove the pawl fixing the CAM Motor, then remove the motor.



Adjustment Procedures (Cassette Deck)

(1) Measuring instruments for Adjustment

1. Audio frequency signal generator (0dbs output at the 600 ohm output terminal from 50Hz to 20KHz)
2. Attenuator (600 ohm impedance)
3. Electronic voltmeter
4. STANDARD TAPES
   VTT-703L(head azimuth adjustment)
   VTT-712 (tape speed , wow & flutter)
   VTT-724 (Reference level)
5. Recording standard tapes
   AC-513 (CrO2), TS-5 (SF) or equivalent. (Use JVC standard tape)
6. 600-ohm resistor for attenuator matching
7. WOW & FLUTTER meter with frequency counter
8. Distortion meter with band-pass filter
9. Torque gauge : CTG-N (cassette type)
10. C-120 tape (for checking the tape running)

(2) Adjustment and repairing the mechanism

(Adjust and inspect the mechanism before adjusting the electronic circuit)

Item	Adjustment Method	Standard value	Remarks
Adjusting azimuth of rec/play head	1. Connect an electronic voltmeter to the VCR/DAT REC terminal. (about 1 volt output) 2. Play back VTT-703L		1) When the specified characteristic cannot be obtained because of head wear, cut wire, excessive magnetization, etc., replace the head and adjust the head azimuth. Also, perform the adjustment of the playback level, recording bias current, recording level, etc. 2) When there is the difference of more than 3 ~ 4 dB between left and right output levels, replace the head to avoid coomplaints.
A mechanism 	3. Adjust screw Ⓐ so that the output of the voltmeter becomes maximum when PLAY (▶) is pressed.	Maximum	
	4. Adjust screw Ⓑ so that the output of the voltmeter becomes maximum when PLAY (◀) is pressed.	Maximum	
	5. After making the adjustment,apply screw lock to prevent screws Ⓐ and Ⓑ coming loose .		
B mechanism 	6. Adjust screw Ⓐ so that the output of the vltmeter becomes maximum when PLAY (▶) is pressed.	Maximum	
	7. Adjust screw Ⓑ so that the output of the voltmeter becomes maximum when PLAY (◀) is pressed.	Maximum	
	8. After making the adjustment,apply screw lock to prevent screws Ⓐ and Ⓑ coming loose .		
Playback torque	Measure the torque in the playback mode using the torque measurement cassette CTG-N.	26 ~ 62 g-cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Fast forward torque	Measure the torque in the fast forward mode by the above method.	80 ~ 200 g-cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Rewind torque	Measure the torque in the rewind mode by the above method.	80 ~ 200 g-cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Wow & flutter	Play back VTT-712 and connect the wow & flutter meter to the SPK OUT terminals , its reading should be within 0.2% (WRMS).	Less than 0.2%	As a complaint may occur if the wow & flutter fluctuates by 0.1% even though it is allowed in the standard, repairing is required.

(3) Electrical Circuit Adjustments

Make the following adjustments after adjusting the head azimuth.
In principle, the adjustments should be made in the following sequence.
Set the NR switch to OFF and the BEAT CUT switch to "1".
Adjustments marked with an asterisk (*) should always be made after the head is replaced.

Item		Adjustment Method	Adjustment Location	Standard Value	Remarks
Motor speed		1. Play back VTT-712 and connect a frequency counter to the VCR/DAT terminals.	Semi-fixed resistor on the main PC Board		Connect a wow & flutter meter with a built-in frequency counter to the VCR/DAT REC terminal.
		2. Normal-speed adjustment Play back deck B and adjust the semi-fixed resistor VR482.	VR482	3,000 ±10 Hz	Adjust the normal speed first, and perform the high speed adjustment.
		3. High-speed adjustment Play back deck A and adjust the semi-fixed resistor VR481.	VR481	6000 ±10Hz	
* 1	Playback level	Play back VTT-724 (1 kHz) and connect an electronic voltmeter between W491 and W330 for left, or W329 and W330 for right. And then, adjust the semi-fixed resistors.	A deck (L) VR451 (R) VR452 B deck (L) VR281 (R) VR282	400mV	The playback level varies when the head is replaced so should be adjusted. Use an electronic voltmeter with an impedance of 100 kΩ or more.
* 2	Recording bias frequency	Connect a frequency counter between W325 (L), W399(R) and W326(E), and play back a METAL tape.	L331	100 ± 5 kHz	
* 3	HX PRO adjustment	Adjust the L341 for L channel (L342 for R channel) so that the DC voltage becomes minimum at both ends of R271 (R272).	L341(L) L342(R)	90~130mV	
* 4	Recording frequency response	Record 1 kHz/10 kHz with the NR switch off and input 30mV to VCR/DAT terminals. While playing back these recorded signals, adjust the variation of the 10 kHz outputs from the 1kHz output to the standard value using VR341 and VR342. (Basically, adjust so that the 1 kHz and 10 kHz outputs become flat.)	(L)VR341 (R)VR342	0±3 dB for 10 kHz with 1 kHz as the standard.	1) The recording and playback frequencies of a cassette deck are adjusted by adjusting the bias. This is because the frequency response depends more on the bias current than with an open-reel deck. 2) Perform the adjustment with normal tape and confirm that the values are within the range for metal tape.
		Note: After completing the recording level adjustment in item 3, check the recording and play back frequencies with the NR switch on. Fine adjust again if the value is 0±4 dB or more at 1 kHz and 10 kHz.			

	Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
* 5	Recording Level	1) Input a 1 kHz (300mV) to VCR / DAT terminals and record on the left and right channels . 2) Connect an electronic voltmeter between L and E of NR TR for left, or R and E for right. And then, adjust the semi - fixed resistors when playing back.	(L)VR311 (R)VR312	300mV	Adjust with normal tape and make sure that the level difference is 1.5 dB or less with metal tape and that the left/right level difference is 1.0 dB or less.
* 6	Recording/ playback distortion	1) Input a 1 kHz (300mV) to VCR / DAT terminals and record it. 2) Play it back and check the out-put with a distortion meter to make sure it is the rated value.		less than 2%	Perform after the bias current and recording level adjustments.
7	Recording/ playback S/N ratio	1) Input a 1 kHz (300mV) to VCR / DAT terminals and record it. While recording, remove the input and record without a signal. 2) Play back and use an electronic voltmeter to compare the 0 dB recording output and the out-put of the recording without a signal to make sure this is the rated value.		more than 45 dB	
8	Erase ratio check	1) Input a 1 kHz (950mV) to VCR / DAT terminals and record it. 2) Rewind and erase part of the recorded section. 3) Compare the outputs of the recorded and erased sections using an electronic voltmeter.		more than 55 dB	Connect a 1 kHz band-pass filter between the deck and electronic Voltmeter When making the adjustment.
					9	Auto-stop check	When playing back and recording, make sure to operate AUTO STOP.

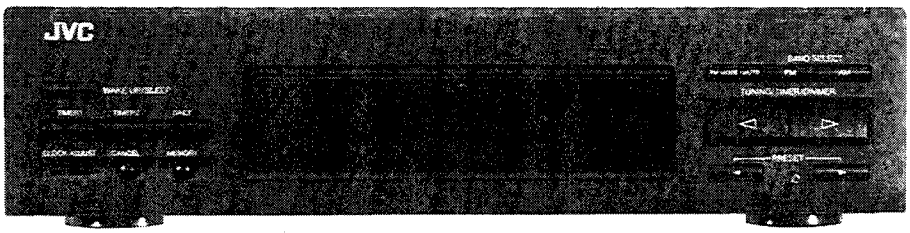
SERVICE MANUAL

COMPACT COMPONENT SYSTEM

MODEL NO. DX-MX70BK/CA-MX70BK

(UNIT NO. FX-MX70BK)



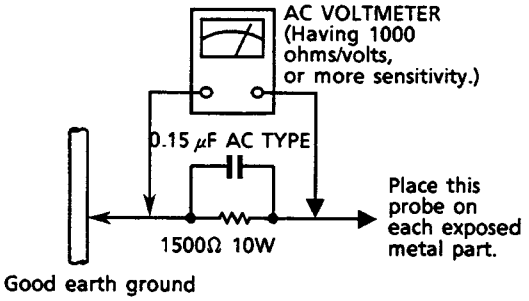
* For instruction manual, please refer to the CA-MX70BK (S.M.NO.20243) or DX-MX70BK (S.M.NO.20249) .
* AX-MX70BK is needed (for power supply etc.) when servicing.

Contents

No. 20245
Mar. 1991

Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (⚠) on the Parts List in the Service Manual. The use of a substitute repalcement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.
5. Leakage currnet check (Electrical shock hazard testing)
   After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, contorl shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.
   Do not use a line isolation transformer during this check.
   - Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularily any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).
   - Alternate check method
     Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500Ω 10 W resistor paralleled by a 0.15 μF AC-type capacitor between an exposed metal part and a known good earth ground.
     Measure the AC voltage across the resistor with the AC voltmeter.
     Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and meausre the AC voltage across the resistor.
     Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).



Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

Specifications

FM TUNER SECTION

Tuning range : 87.5 MHz — 108.0 MHz
Usable sensitivity : 0.95μV / 75 ohms(10.8 dBf)
Signal-to-noise ratio : MONO (at 85dBf) 80 dB / 72dB
(IHF-A Weighted / DIN) STEREO (at 85dBf) 73 dB / 64dB

AM TUNER SECTION

MW
Tuning range

Area	Channel space	
	9kHz	10kHz
U.S.A. Canada	—	530kHz~1710kHz
Continental Europe, U.K.	522kHz~1629kHz	—
Italy	522kHz~1629kHz	—
Australia	522kHz~1629kHz	—
Other Area	531kHz~1602kHz	530kHz~1600kHz

LW

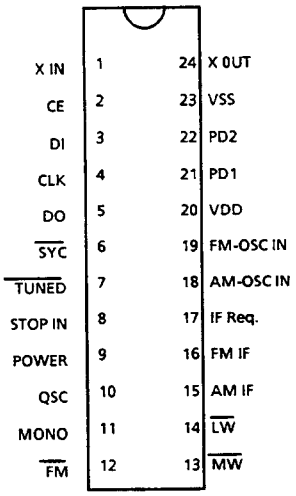
32	VCC	I	Power supply	64	G6	O	〃

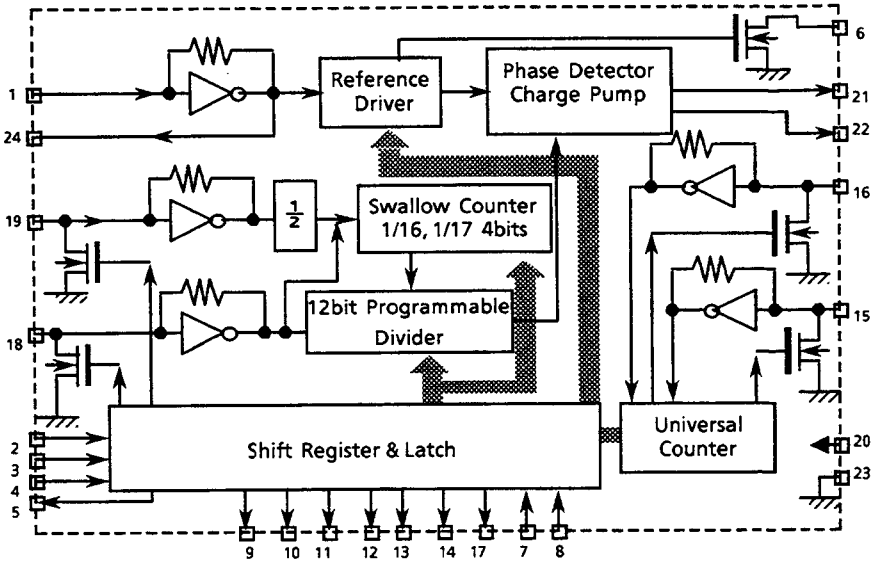
■ LC7218 (IC102) : PLL Synthesizer

1. The main function descriptions
   (1) It makes the local oscillation frequency by the control data from IC201.
   (2) Decode the control signal and transmit the signal for receiving conditions.
   (3) For the best tuning, count the internal-frequency and transmit the data to IC201.

2. Terminal Layout



3. Block Diagram



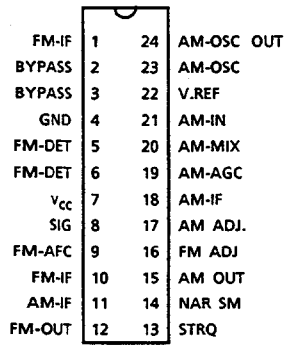
4. Pin Functions

Pin No.	Symbol	I/O	Functions and Operations
1,24	X in , X out	I/O	Crystal oscillator (7.2MHz).
2	CE	I	Fix the chip enable to "H" when inputting (DI) and outputting (DO) the serial data.
3	DI	I	Receive the control data from the controller (IC201).
4	CLK	I	This clock is used to synchronize data when transmitting the data of DI and DO.
5	DO	O	Transmit the data from LC7218 to the controller which is synchronized with CL.
6	SYC	–	Not used.
7	TUNED	I	Receive the tuned signal from IC104 (LA1266A).
8	STOP IN	I	Not used.
9	POWER	O	Not used.
10	QSC	O	ON mode with " H " and OFF mode with " L ". (NOT USED)
11	MONO	O	It is "H" on FM-monaural, "L" on FM-Stereo.
12	FM	O	It is "H" on FM mode.
13	MW	O	It is "H" on MW mode.
14	LW	O	It is "H" on LW mode.
15	AM-IF	I	Universal counter input for AM-IF from IC104 (LA1266A).
16	FM-IF	I	Universal counter input for FM-IF from IC104(LA1266A).
17	IF Req.	O	Output the "IF-signal request" to IC104 when the pin-7 (TUNED) go to "H".
18	AM OSC IN	I	Input the local oscillator signal of AM.
19	FM OSC IN	I	Input the local oscillator signal of FM.
20	VDD	–	This is a terminal of power supply.
21	PD1	O	PLL charge pump output : When the local oscillator signal frequency is higher than the reference frequency high level signals will output. When it is lower than the reference frequency, low level signals will output. When it is same as reference frequency signals, it will be floating.
22	PD2	O	Not used.
23	VSS	–	Power supply.

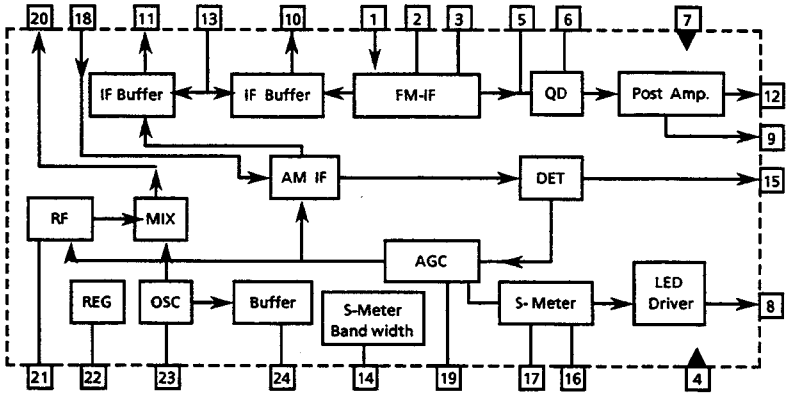
■ LA1266A (IC104) : FM AM IF AMP & detector

1. The main function descriptions
   (1) Amplify and detect of FM IF frequencies.
   (2) It has local oscillator and mixer for AM, and amplify the AM-IF signal.

2. Terminal Layout



3. Block Diagram



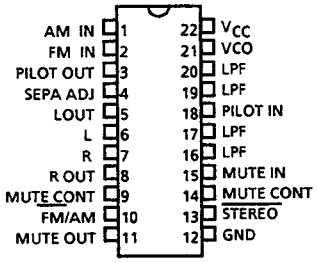
4. Pin Functions

Pin No.	Symbol	I/O	Functions and Operations
1	FM IF	I	This is an input terminal of FM IF Signal.
2,3	BYPASS	–	Bypass of FM IF Amp.
4	GND	–	This is the device ground terminal.
5,6	FM DET	–	FM detect transformer.
7	V_{CC}	–	This is the power supply terminal.
8	TUNED	O	When the set is tunning ,this terminal become "L".
9	FM AFC	O	This is an output terminal of voltage for FM - AFC.
10	FM IF OUT	O	When the signal of IF REQ of IC102(LC7218) applied to pin17, the signal of FM IF does output.
11	AM IF OUT	O	When the signal of IF REQ of IC102(LC7218) applied to pin17, the signal of AM IF does output.
12	FM OUT	O	FM detection output.
13	STRQ	I	The IF-signals come out from pin10 (FM-IF) or pin11 (AM-IF) while this terminal going to "High".
14	NAR SM	–	Control the Band-width of signal meter.
15	AM OUT	O	AM detection output.
16	FM ADJ	–	For adjust the stop level (or mute level) of FM.
17	AM ADJ	–	For adjust the stop level (or mute level) of AM.
18	AM-IF	I	Input of AM IF Signal.
19	AM-AGC	I	This is an AGC voltage Input terminal for AM.
20	AM-MIX	O	This is an output terminal for AM mixer.
21	AM-IN	I	This is an input terminal for AM RF Signal.
22	V.REF	–	Register value between pin9 and pin22 desides the frequency width of the input signal.
23	AM-OSC	–	This is a terminal of AM Local oscillation circuit.
24	AM-OSC OUT	O	AM Local Oscillation Signal output.

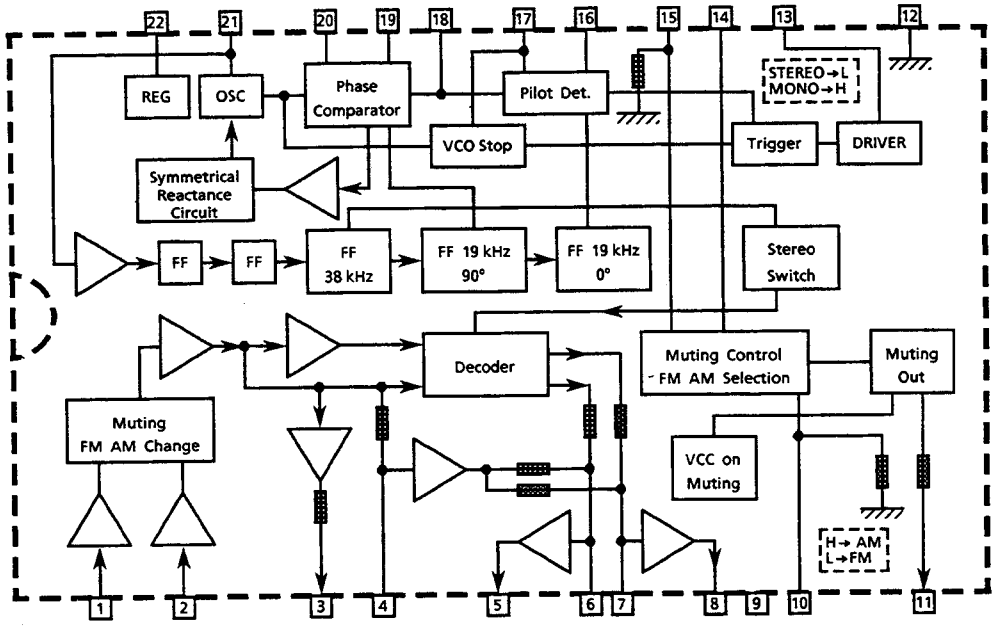
■ LA3401 (IC105) : FM MPX Decorder

1. The main function descriptions
   (1) Decord the FM Multiplex Signal (Stereo signal).
   (2) When receiving FM Stereo Signal, it outputs the signal for indicator.
   (3) AM / FM Audio Amplifier.

2. Terminal Layout



3. Block Diagram



4. Pin Functions

Pin No.	Symbol	I/O	Functions and Operations
1	AM IN	I	This is an input terminal for AM detection signal.
2	FM IN	I	This is an input terminal for FM detection signal.
3	PILOT OUT	O	Output of MPX pilot signal (Connect to Pin18).
4	SEPA. ADJ.	–	Separation adjustment.
5	L. OUT	O	Left channel signal output.
6	L	O	Input terminal of the Left channel Post AMP.
7	R	O	Input terminal of the right channel Post AMP.
8	R OUT	O	Right channel signal output
9	MUTE CONT	–	The mute time is controlled by the connected capacitor when turning the power switch on.
10	FM / AM	I	Change over the FM / AM input. "H" : AM, "L" : FM
11	MUTE OUT	—	Not use
12	GND	–	Ground terminal.
13	STEREO	O	Stereo indicator output. Stereo : "L", Mono : "H"
14	MUTE CONT	–	The mute time is controlled by the connected capacitor when changing over the FM/AM .
15	MUTE IN	I	Mute signal input. "H" : Mute on, "L" : Mute off.
16	LPF	–	Low pass filter of pilot detector.
17	LPF	–	While this terminal goes to "H", the VCO stop.
18	PILOT IN	I	PLL input.
19	LPF	–	Low-pass filter of PLL.
20	LPF	–	Low-pass filter of PLL.
21	VCO	I	Voltage controlled oscillator terminal.
22	V_{CC}	–	Power supply.

Internal Connecions for the FL Display Tube

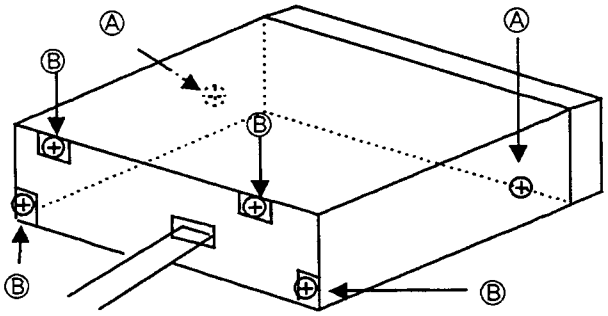
Disassembly Procedures

■ Removing the Top Cover

1. Remove the 4 screws Ⓑ fastening the rear side of the Top cover, and 2 screws Ⓐ fastening both sides .
2. Remove the Top Cover.

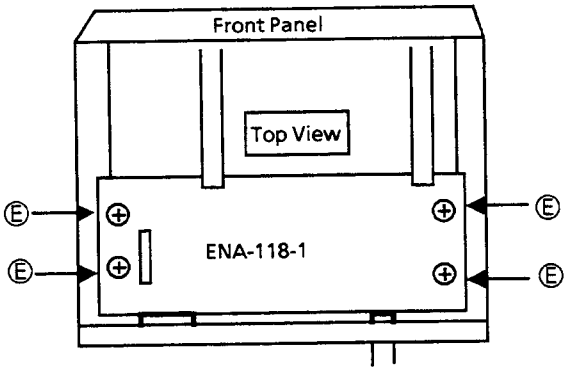


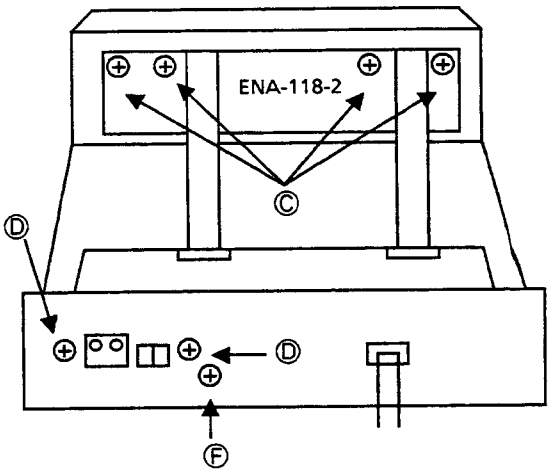
■ Removing the Front P.C.Board.

1. Remove the Top Cover.
2. Remove 4 screws Ⓒfastening the P.C.Board,and remove it.

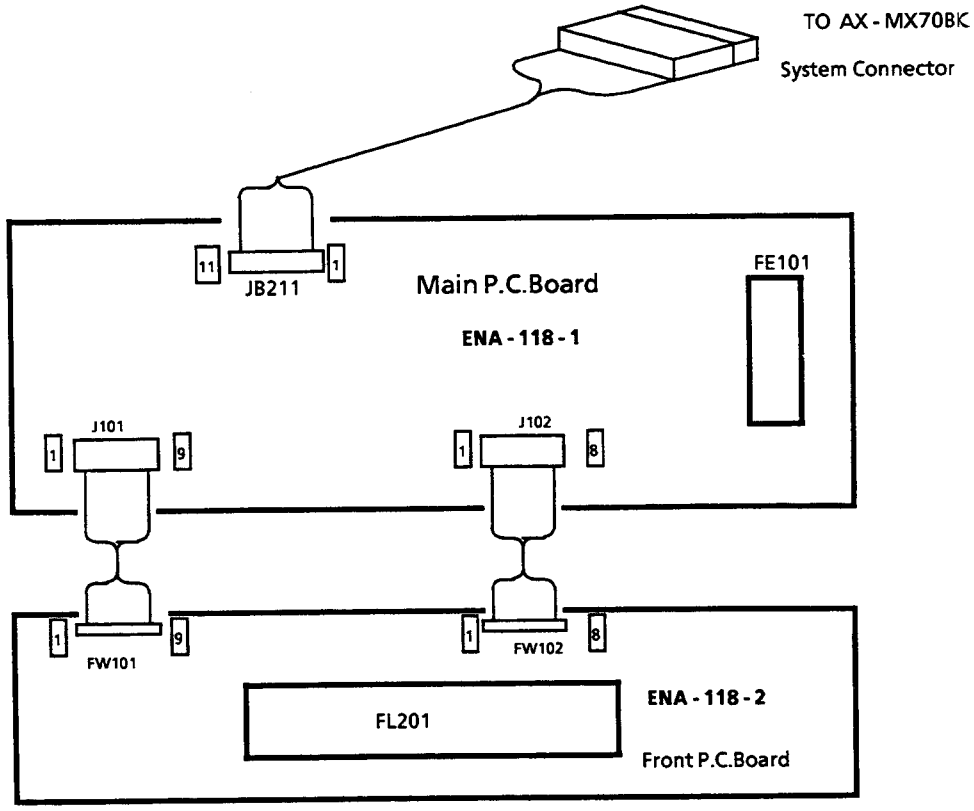
■ Removing the Main P.C. Board

1. Remove the Top Cover.
2. Remove the 4 screws Ⓔ fastening the P.C. Board.
3. Remove the screws Ⓓ Ⓕ and remove the P.C.Board.

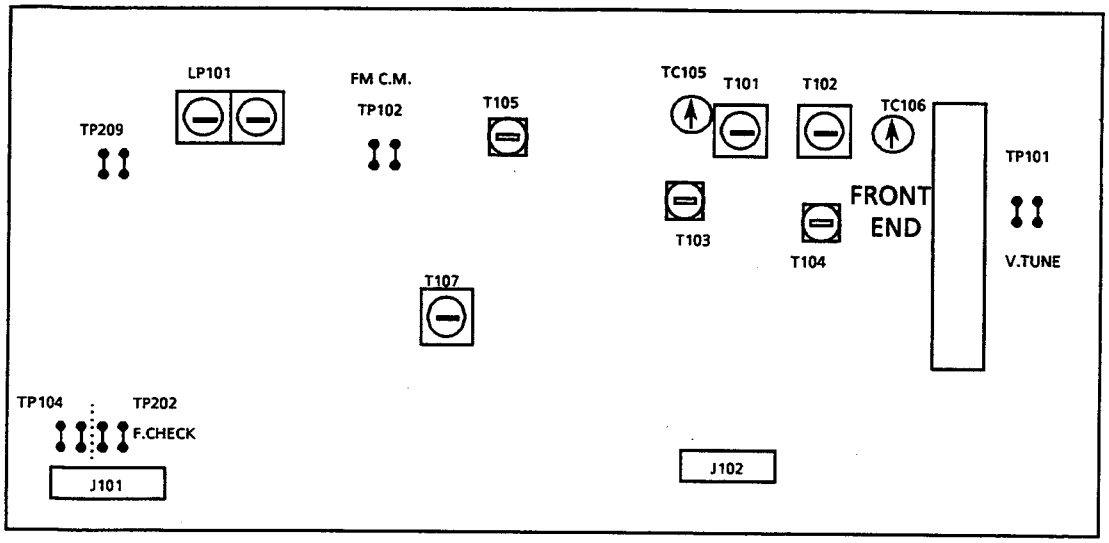




Connection Diagram



FM/AM Tuner Alignment Procedures



■DISCHARGE
When dischargeing the backup, shortcircuit the two terminals of TP104.

1. FM section

■ FM oscillator

(1) Set the frequency display to "108.0MHz".
(2) Confirm that the FM inter-station noise is received.
(3) Confirm that the voltage of test point "TP101" is 8.0V±2.0V.
(4) Set the frequency display to "87.5MHz" and confirm the voltage of test point "TP101" is 1.6V±1.0V.

■ FM detector coil : T105

(1) Connect a digital voltmeter to test point "TP102", and receive to "100.1MHz" signal with SSG at 70dB.
(2) Adjust T105 so that the digital voltmeter reads 0±1.5mV.

2. MW section

Note ( ): Australia, the U.K. and Continental Europe
{ }: Channel space 9kHz for universal version
「 」: Channel space 10kHz for universalversion
[ ]: America, Canada

■ MW oscillator : T103

(1) Set the frequency display to (522kHz) {531kHz}「530kHz」[530kHz] and confirm that the voltage of test point TP101 is (0.9V±0.2V) {1.0V±0.2V}「1.0V±0.2V」[1.0V±0.2V].
(2) Set the frequency display to (1629kHz) {1602kHz}「1600kHz」[1710kHz] and confirm that the voltage of test point TP101 is (7.5V ± 0.8V){ 7.2V± 0.7V}「7.2V± 0.7V」[8.0V±0.8V].
(3) If its voltage exceeds the allowance, adjust T103 to obtain the voltage.

■ MW antenna coil : T101

(1) Connect a loop antenna to the "AM Loop" terminal on the rear panel.
(2) Adjust T101 to obtain the best receiving sensitivity on 600kHz or 603kHz.

■ MW antenna trimmer : TC105

(1) Adjust TC105 to obtain the best receiving sensitivity on 1400kHz or 1404kHz.

3. LW section (for Long Wave Version)
Note : [ ] for Italy

■ LW oscillator : T104

(1) Set the frequency display to 144kHz and adjust T104 so that the voltage of TP101 becomes 0.8V± 0.1V.
(2) Set the frequency display to 353kHz[290kHz] and confirm that the voltage oftest point TP101 becomes 8.0V± 0.9V[5.7V± 0.6V].

■ LW antenna coil : T102

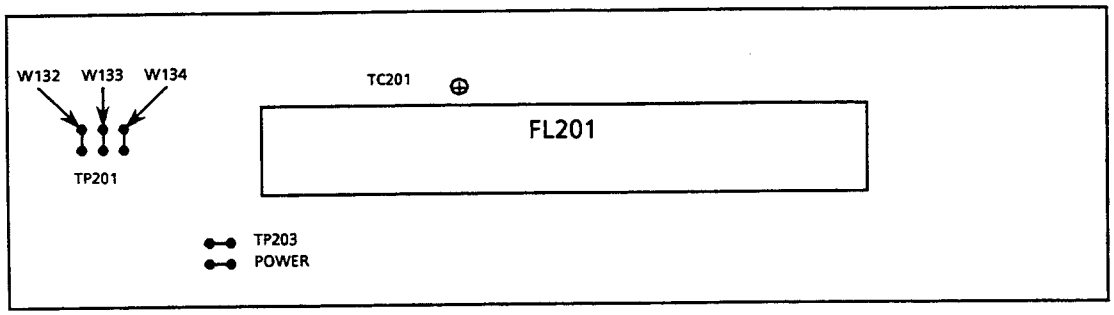
(1) Connect a loop antenna to the "AM Loop" terminal on the rear panel.
(2) Adjust T102 to obtain the best receiving sensitivity on 164kHz[164kHz].

■ LW antenna trimmer : TC106

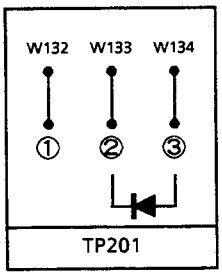
(1) Adjust TC106 to obtain the best receiving sensitivity on 353kHz[245kHz].

※ **Alternately adjust T102 and TC106 so that each sencitivity becomes maximum.**

Clock Generator Frequency Adjustment



1. Switch OFF the AX-MX70BK's power source,then pull out the AC plug.
2. Shortcircuit TP201's terminals ② and ③ with the diode as shown in the accompanying diagram, then insert the AC plug into the receptable to switch the power ON.
3. Confirm that the tuner's FL display is off, then remove the diode and connect the frequency counter to TP 202(FREQ. CHECK).
4. Adjust TC201 so that the counter becomes 34,952.5 ± 0.15 Hz.



Example :
1SS133
1SS119
1S2473

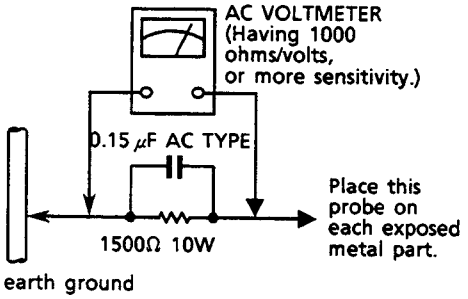
Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (⚠) on the Parts List in the Service Manual. The use of a substitute repalcement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.
5. Leakage currnet check (Electrical shock hazard testing)
   After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, contorl shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.
   Do not use a line isolation transformer during this check.
   - Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).
   - Alternate check method
     Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500Ω 10 W resistor paralleled by a 0.15 μF AC-type capacitor between an exposed metal part and a known good earth ground.
     Measure the AC voltage across the resistor with the AC voltmeter.
     Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and meausre the AC voltage across the resistor.
     Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).



Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

Important for Laser Products

1. CLASS 1 LASER PRODUCT
2. DANGER : Invisible laser radiation when open and interlock failed or defeated. Avoid direct exposure to beam.
3. CAUTION : There are no serviceable parts inside the Laser Unit. Do not disassemble the Laser Unit. Replace the complete Laser Unit if it malfunctions.
4. CAUTION : The compact disc player uses invisible laser radiation and is equipped with safety switches which prevent emission of radiation when the drawer is open and the safety interlocks have failed or are defeated. It is dangerous to defeat the safety switches.
5. CAUTION : If safety switches malfunction. the laser is able to function.
6. CAUTION : Use of controls, adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.
7. CAUTION : The compact disc player provides a laser diode of wavelength 780-790nm and optical output power typical 3mW at the laser diode.

VARNING : Osynlig laserstrålning när denna del är öppnad och spärren är urkopplad. Betrakta ej strålen.

VARO : Avattaessa ja suojalukitus ohitettaessa olet alttiina näkymättömälle lasersäteilylle. Älä katso säteeseen.

ADVARSEL : Usynlig laserstråling ved åbning, når sikkerhedsafbrydere er ude af funktion. Undgå udsættelse for stråling.

ADVARSEL : Usynlig laserstråling ved åpning, når sikkerhetsbryteren er avslott. unngå utsettelse for stråling.

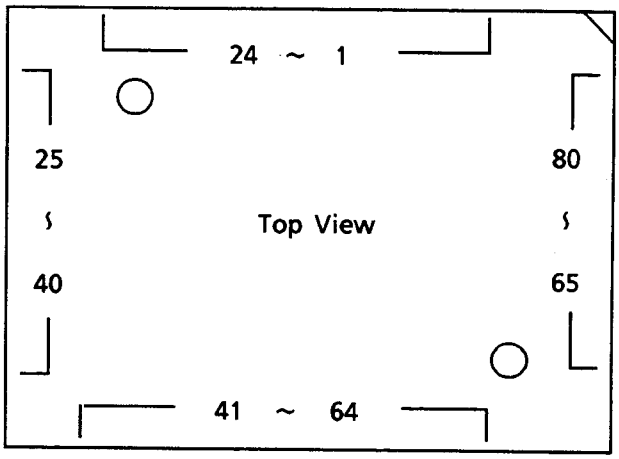
Description of ICs

■ YM3805-H IC841

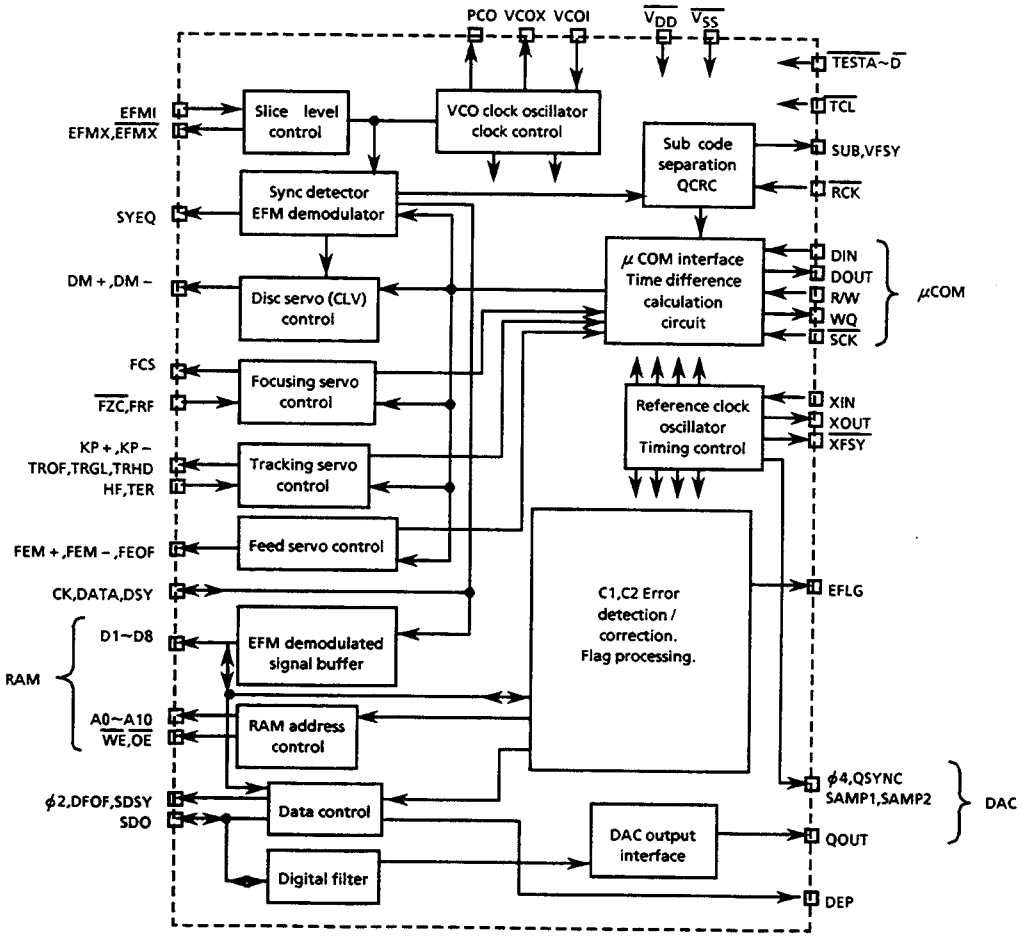
1. Outline:

YM3805-H is a C-MOS LSI for signal processing (SGP) and servo control (SVC) in a CD player. It is used for the demodulation of the EFM signal from the laser pickup, detection / correction of the error signal, signal processing in digital filtering, etc. and for various servo controls (focusing, tracking, spindle and feed servos).

2. Terminal Layout



3. Internal Block Diagram



4. Pin Functions Description

Pin No.	Symbol	I/O	Functions and Operations
1 32 72	V_{DD}	–	These are +5V power supply terminals.
2 · 3	VCOX VCOI	O I	These terminals are used for oscillating VCO (Voltage Controlled Oscillator) clock. (8.6436MHz)
4	PCO	O	This terminal is control output terminal for VCO clock, and sets oscillation circuit to rise frequency when average voltage is high.
5 · 9 41 · 78	V_{SS}	–	These are ground terminals.
6 7	$\overline{EFMX}$ EFMX	O O	These terminals connect with EFM signal slice level control circuit. Amplified EFM signal by limited amplitude comes from these terminals.
8	EFMI	I	Input the EFM signal (1~2Vpp) to the this terminal.
10	SYEQ	O	This is a monitor output terminal. It becomes "H" when there is a agreement synchronizing signal in EFM signal and inner counter.
11 12	DM+ DM–	O O	They are output terminals controlling disc motor drive circuit. These do not become "H" at the same time.
13 14 15	$\overline{FCS}$ $\overline{FZC}$ FRF	O I I	This is an output terminal for taking in focus. This is a terminal to get FZC signal which changing "H" to "L" when pick-up is in focus. Input "H" signal when there is reflected light of compact disc at this terminal.
16 17 19 20 21 22 23	HF TER TROF TRGL TRHD KP+ KP–	I I O O O O O	This is a terminal inputting envelope of EFM. This is a terminal inputting tracking error signal. This is a terminal for cutting off the tracking error signal of tracking servo circuit. This is an output terminal for getting down the gain of tracking servo circuit. This is an output terminal for holding tracking error signal of tracking servo circuit while following KP+ or KP– are output. They are connected with tracking servo circuit. They are terminals for searching.
24 25 26	FEOF FEM+ FEM–	O O O	This is an output terminal for cutting off the input signal of feed servo circuit. There are output signals for high speed feed and they are connected with feed servo circuit.
27	CK	I/O	This is the check terminal. It has a 4.3218MHz ; half of VCO.
35	WQ	O	This connects with microcomputer. It is a request output terminal for demanding to send the data from SVC to microcomputer.
36	R/W	I	This connects with microcomputer and it is an output terminal for switching data transmission mode. It enables to transmit data from SVC to microcomputer when R/W is "L" and from microcomputer to SVC when R/W is "H". (Read /Write)
37	DOUT	O	This is a data output terminal. It enables to transmit the data from SVC to microcomputer according SCK clock input when R/W is "L".
38	DIN	I	This is a data input terminal. It enables to transmit the data from microcomputer to SVC according SCK clock input when R/W is "H".
39	$\overline{SCK}$	I	It is a clock input terminal needed for transmitting the data.
40 42~50 53	A0 A1~A9 A10	O	These are address output terminals and are connected to the RAM.
51	$\overline{WE}$	O	This terminal is connected to the RAM; the RAM is set to the write mode when this terminal is "L". (Write enable)
52	$\overline{OE}$	O	This terminal is connected to the RAM; the RAM is set to the read mode when this terminal is "L". (Output enable)
54~61	D8~D1	I/O	These are data Input and Output terminals and are connected to the RAM.
62	DEP	O	This terminal a Flag for de-emphasis. De-emphasis is necessary when this terminal is "H".
64 65 68	QSYNC QOUT Φ4	I/O O O	This terminal output the clock signals to find that the serial data is channel 1 or channel 2. This terminal output the digitarized audio signal. they come out channel 1 and channel 2 alternately. Φ4 is a 4.3218MHz crystal clock.
76 77	SAMP1 SAMP2	O O	These terminals connect with D/A converter. These signal are use to make degliching signal.
79 80	XIN XOUT	I O	A crystal resonator (8.6436MHz) is connected.
18 28~31 33 · 34 63 66 · 67 69~71 73~75			Not used.

■ HD404019RB14S (IC991) : Micro-computer

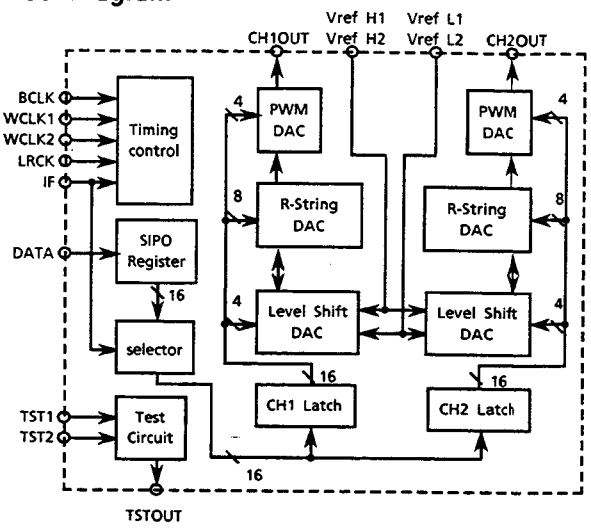
2. Block Diagram



3. Pin Functions

Pin No	Symbol	I/O	Functions and Operations
1	CH1 OUT	O	Channel 1 Output pin.
2	Vref H1	I	Reference voltage "H" input pin1.
3	Vref H2	I	Reference voltage "H" input pin2.
4	V_{DD}	—	Power supply, +5V.
5	WCLK2	I	Word clock 2 input pin. When IF pin is at high level, WCLK2 pin should be set at low level. When IF pin is at low level, this generates the internal signal used to latch the CH1 data of the digital audio signal, using the falling edge of WCLK2.
6	LRCK	I	LR clock input pin. This shows the CH1 and CH2 of the input digital audio data. When LRCK is at high level, it corresponds to CH1 data. When LRCK is at low level, it corresponds to CH2 data.
7	WCLK1	I	Word clock 1 input pin. When IF pin is at high level, this pin generates the internal signal used to latch both the CH1 and CH2 data, using the falling edge of WCLK1. When IF pin is at low level, it generates the internal signal used to latch the CH2 data.
8	DATA	I	Digital audio data input pin. When IF pin is at high level, the data signal is input by each bit serially from the MSB. When IF pin is at low level, the data signal is input by each bit serially from the LSB.
9	BCLK	I	Bit clock pin. This clock signal is used when reading the digital audio data by each bit serially, and also used for PWM D/A converter.
10	V_{DD}		Power supply, +5V.
11	TST OUT	O	Test signal output pin. Normally leave this pin open.
12 13	TST1 TST2	I	Test signal input pin. Normally connect to GND terminal.
14	IF	I	Interface select pin. When IF pin is at high level, the digital audio data is input from the MSB first. When IF pin is at low level, the digital audio data is input from the LSB first.
15	GND	—	Ground.
16	Vref L1	I	Reference voltage "L" input pin1.
17	GND	—	Ground.
18	Vref L2	I	Reference voltage "L" input pin2.
19	NC	—	No connection.
20	CH2 OUT	O	Channel 2 output pin.

Disassembly Procedures

1 Removing the top cover

(1) Remove the 2 screws on both sides of the top cover and the 4 screws on the rear side.

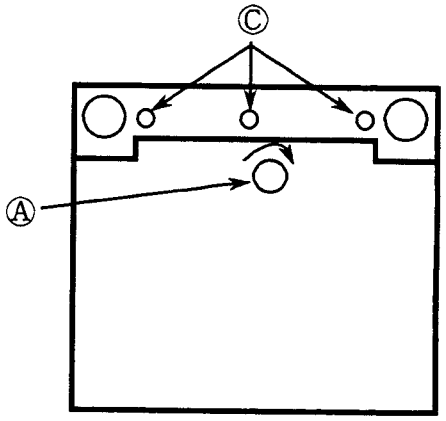
(2) Gently spread both sides of the top cover to the outside, lift up the rear section, and remove the top cover.

2 Removing the tray

(1) Remove the top cover.
(2) Switct on the power of AX-MX70BK.
Press the OPEN / CLOSE switch to bring the tray forward and with the tray forward, switch off the power.

(3) Remove the screw on the tray Ⓑ.
(4) Pull the tray toward the front to move it.

Note : If the power does not come on due to breakdown or the , insert a Philips screwdriver through the hole at the bottom of the front panel and turn it clockwise to bring the tray forward Ⓐ.



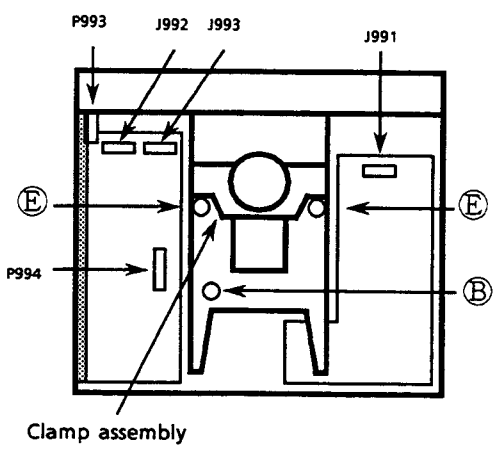
3 Removing the front panel assembly

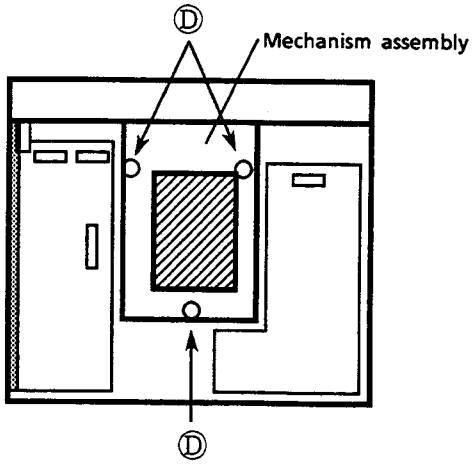
(1) Remove the top cover.
(2) Remove the connectors(J991 , J992 , J993) connecting with main PC Boards.

(3) Remove the 3 screws Ⓒ at the bottom of the front panel.

4 Removing the mechanism assembly

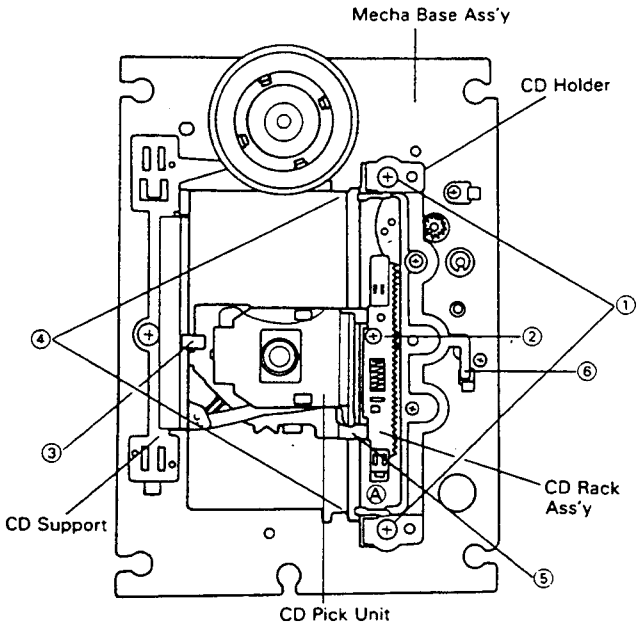
(1) Remove the top cover.
(2) Remove the tray.
(3) Remove the connectors (P993 , P994).
(4) Remove the 2 screws Ⓔ holding the clamp assembly, then remove it.
(5) Remove the 3 screws Ⓓ holding the mechanism assembly.





6. Removing the Laser Pickup

(1) Remove the top cover, tray assembly and the clamp.
(2) Move the Pickup Unit from rest position to the center pushing ⑤ point with finger.
(3) Remove the screw ② from the CD RACK assembly, and remove the CD RACK assembly.
(4) Remove the screw① from the mechanical base assembly.
(5) Remove the CD HOLDER fastening the shaft from the mechanical base assembly.(Release the hook ⑥)
(6) Remove the CD Pick Unit with the shaft.

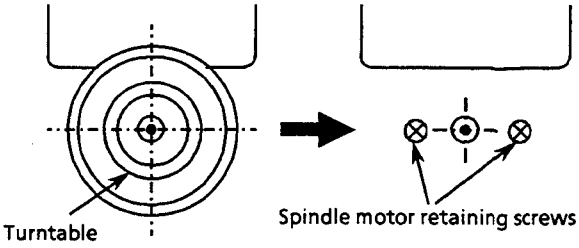


7. Laser Pickup installation

(1) Connect two wires with the connectors of P.C.Board.
(2) While installing the ③ in the CD Support, set the shaft on the base hook④.
(3) Install the CD Holder.
(4) Install THE CD Rack assembly in CD Pick Unit.
1) Fit end Ⓐ
2) Fix screw ②.

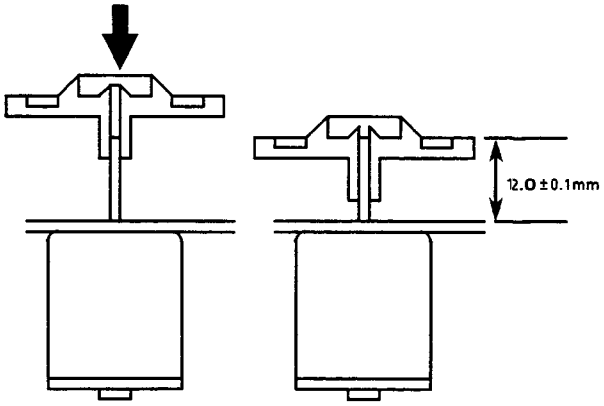
8. Spindle motor removal

(1) Remove the Mechanism assembly.
(2) Remove the Clamp assembly.
(3) Remove the turntable, and remove the two screws retaining the spindle motor.
(4) Remove the screw retaining the Spindle andFeed Motor P.C. Board and unsolder it.

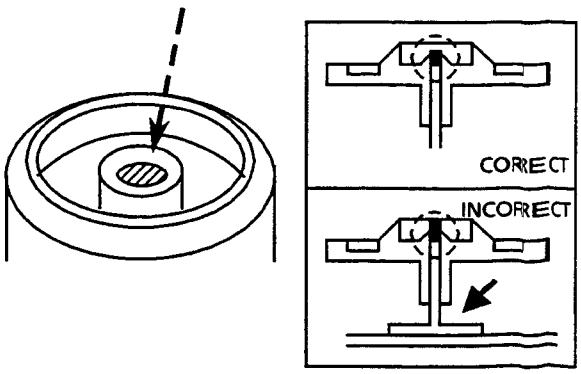


9. Spindle motor installation

(1) Tighten the 2 screws to the same torque.
(2) Fasten the Spindle and Feed Motor P.C. Board with the screw and solder.
(3) Install the turntable.When installing, press straight down at the center of the turntable until the distance from the surface of the mechanism base to the top of the turntable is exactly 12.0 ± 0.1mm.



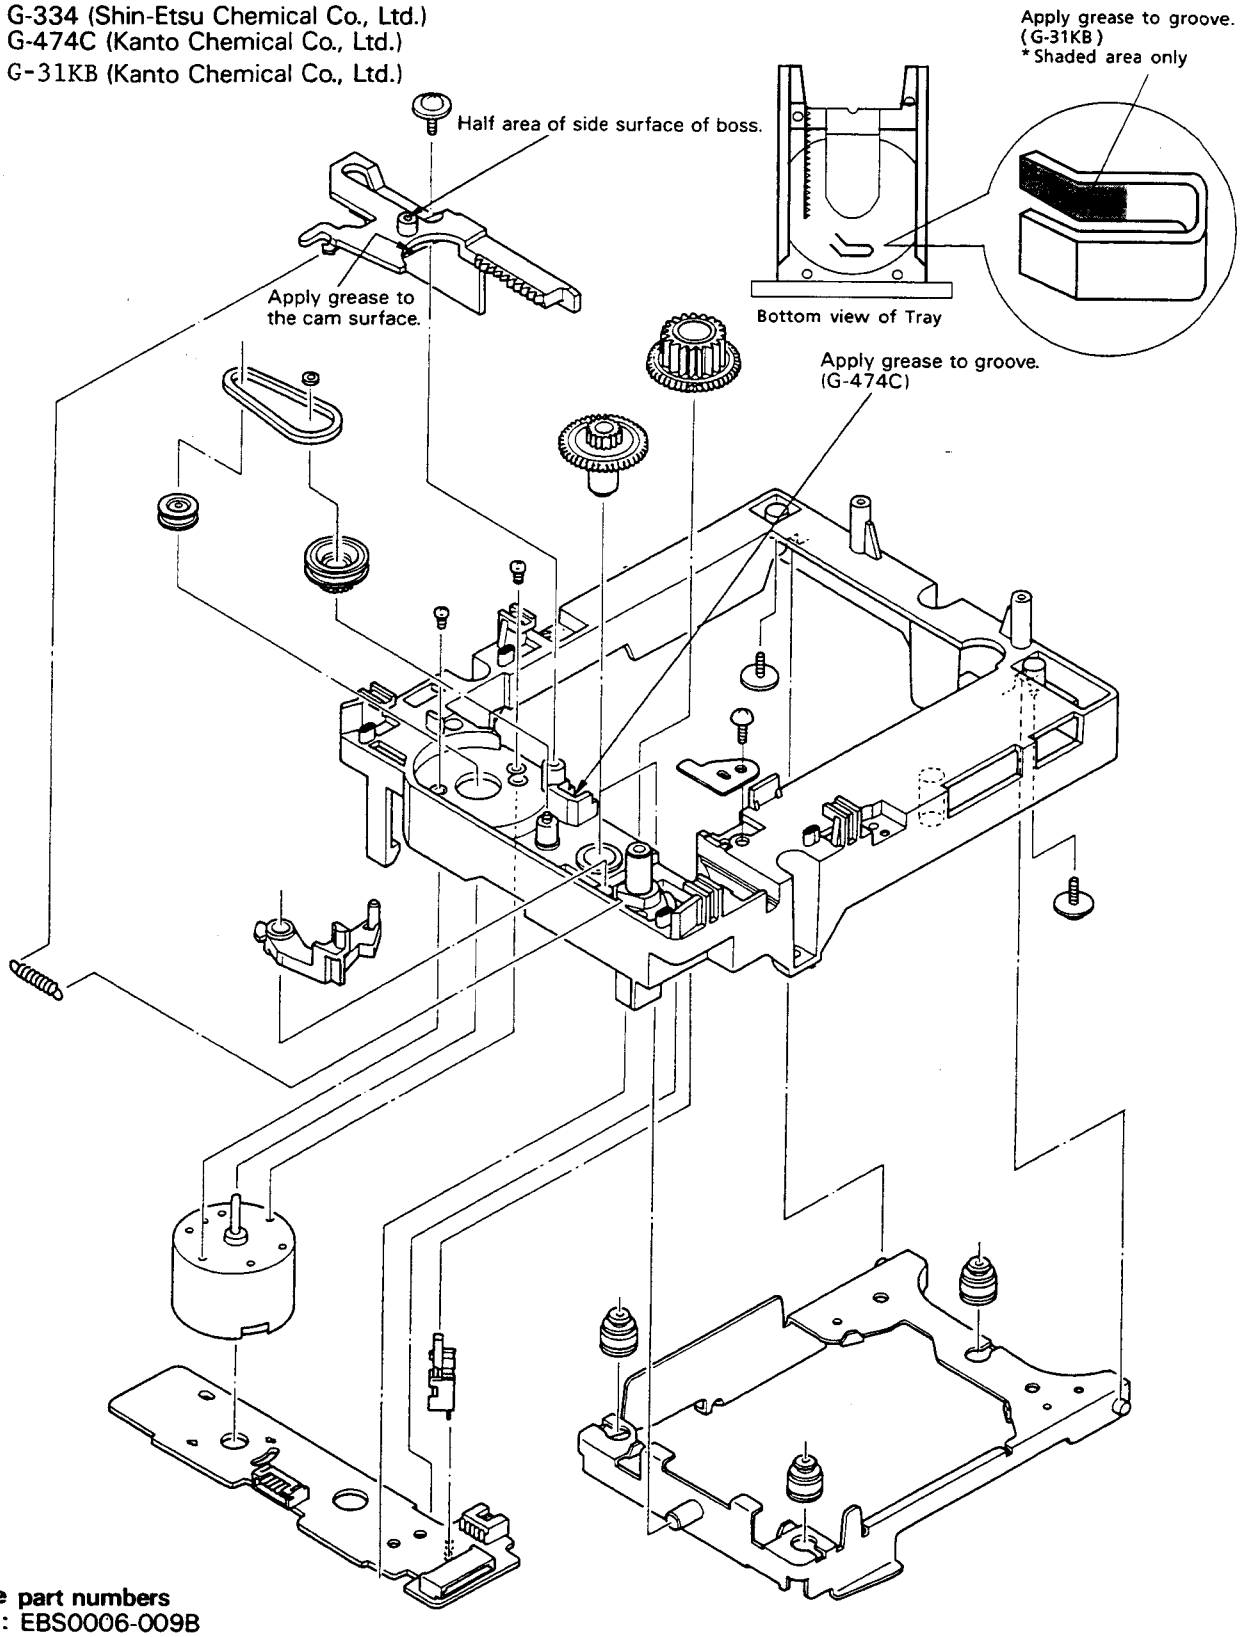
(4) After insertion is complete, bond the motor shaft and turntable together (at the section marked by an arrow in the figure on the left below).



(5) Use "LOCKTITE" #460 bonding agent and apply as little as possible. Take care not to allow any excess bonding agent to get onto the turntable. Be extremely careful not to allow bonding agent to adhere to the motor bearings (the section marked by an arrow in the figure on the right.)

Application Points for Grease

Grease used
- G-334 (Shin-Etsu Chemical Co., Ltd.)
- G-474C (Kanto Chemical Co., Ltd.)
- G-31KB (Kanto Chemical Co., Ltd.)



Grease part numbers
G-334: EBS0006-009B
G-474C: EBS0006-019B
G-31KB: EBS0006-013B

Maintenance of Laser Pickup

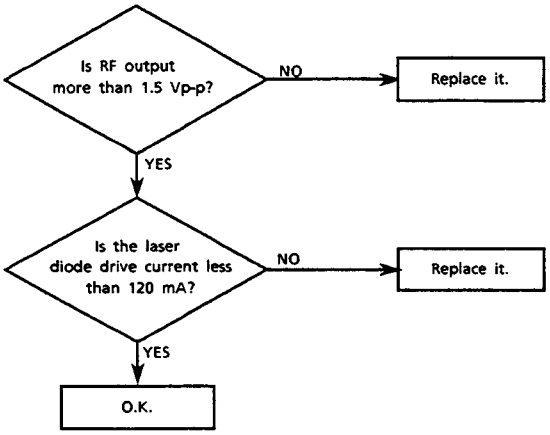
1. Life of the laser diode

When the life of the laser diode has expired, the following symptoms will appear.

(1) The level of RF output (EFM output: amplitude of eye pattern) will be low.

(2)The drive current required by the laser diode will be increased.

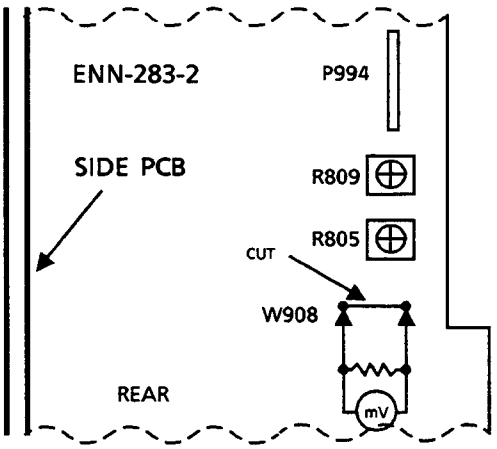
In such a case, check the life of the laser diode following the flowchart below



2. Measurement of laser diode drive current

Replace the jump wire (W908) shown below with the resistor (1Ω).

Measure the voltage across the resistor with a milli-voltmeter. When the voltage is more than 120mV, it shows that the life of the laser diode has expired



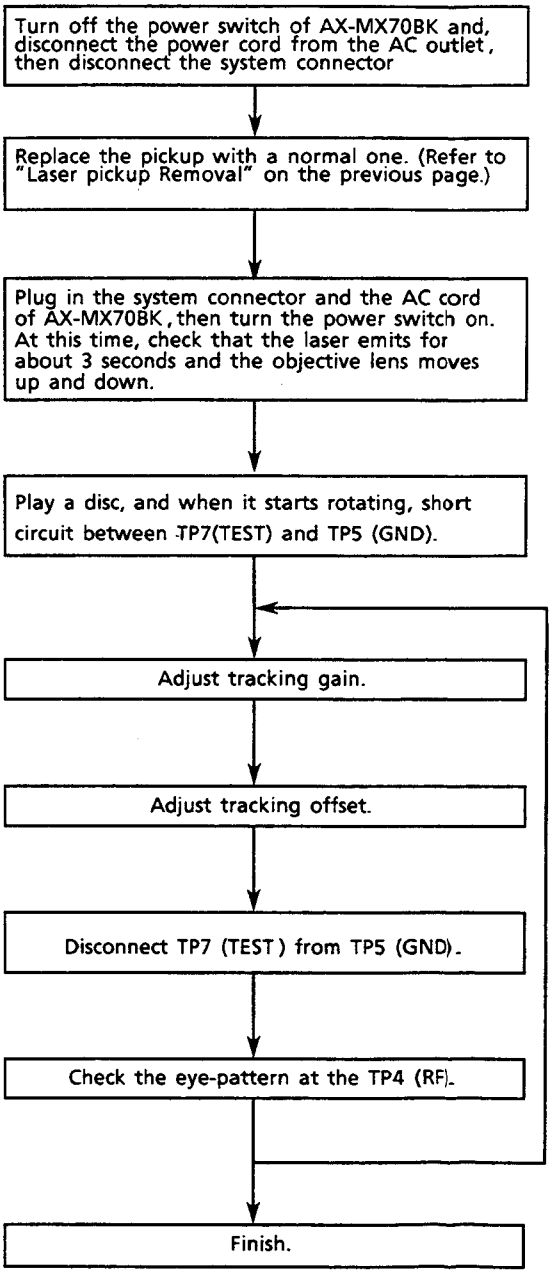
3. Semi-fixed resistor on the APC PC board

The semi-fixed resistor on the APC printed circuit board which is attached to the pickup is used to adjust the laser power. Since this adjustment should be performed to match the characteristics of the whole optical block, do not touch the semi-fixed resistor.

If the laser power is lower than the specified value, the laser diode is almost worn out, and the laser pickup should be replaced.

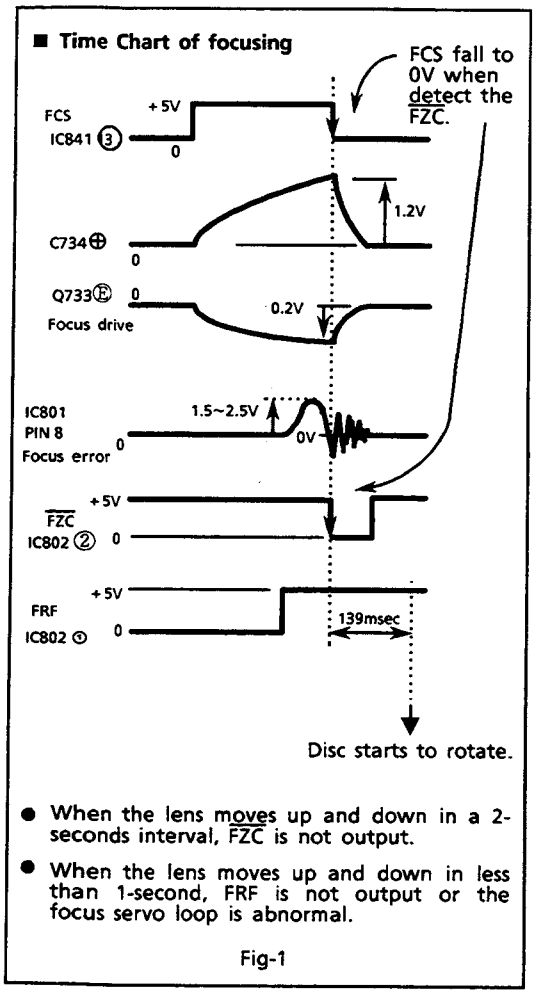
If the semi-fixed resistor is adjusted while the pickup is functioning normally, the laser pickup may be damaged due to excessive current.

Replacement of Laser Pickup



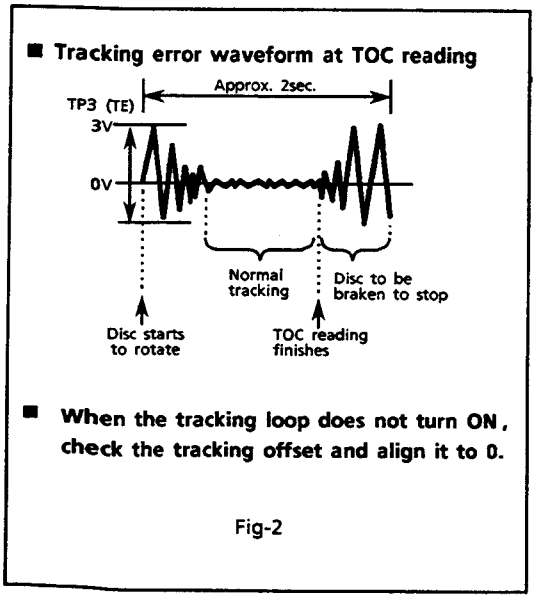
Note: Since one adjustment may affect other settings, repeat these adjustments a few times.

Flow of Functional Operation Until TOC is Read



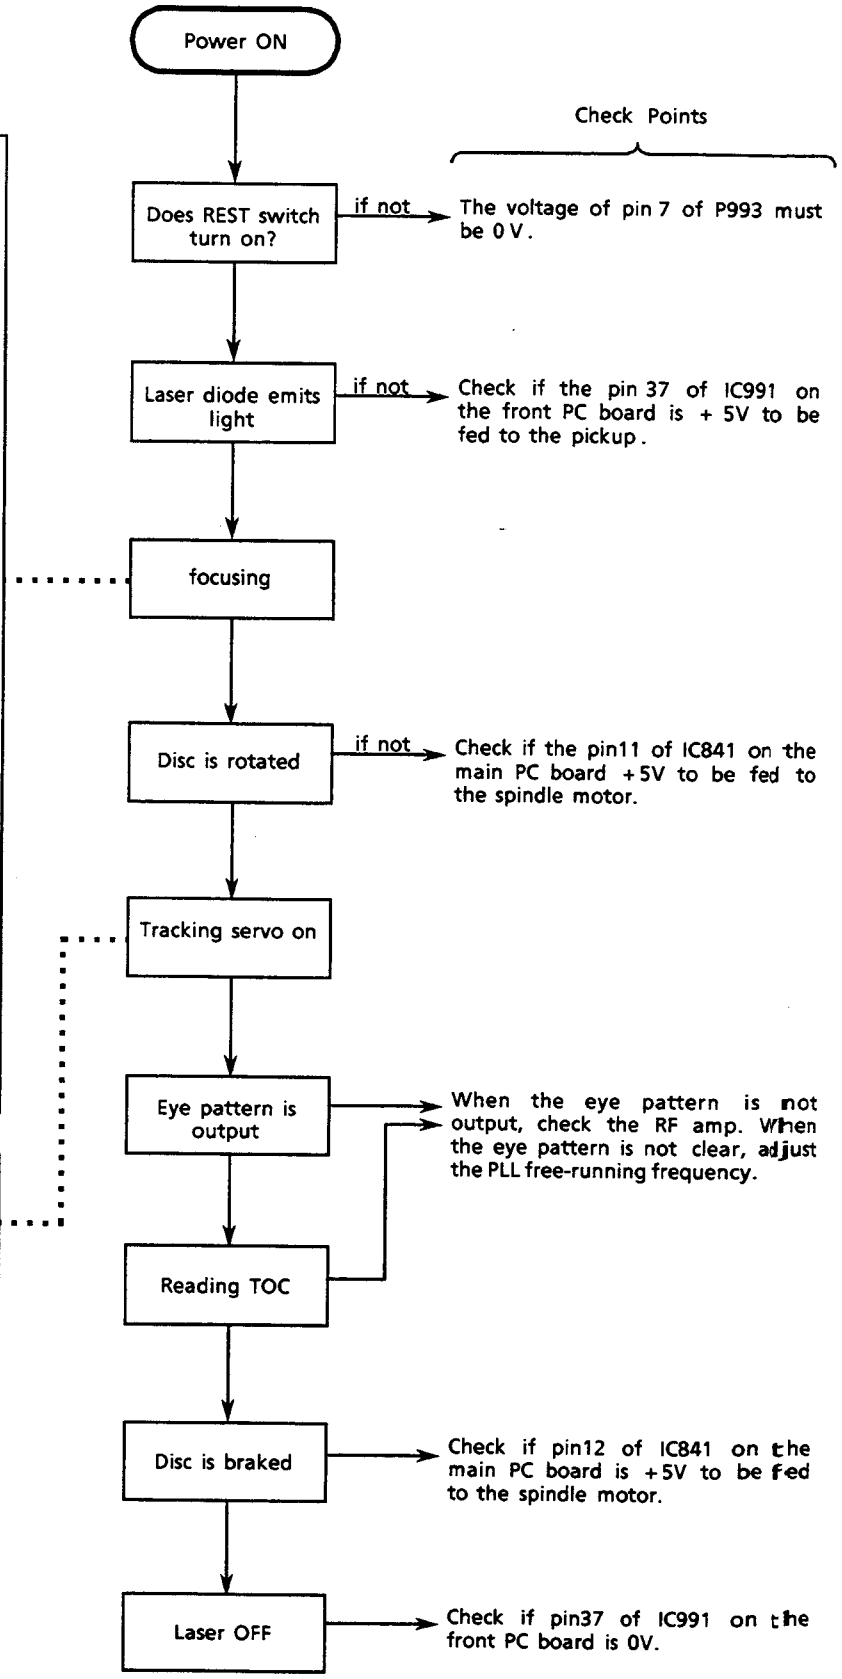
- When the lens moves up and down in a 2-seconds interval, FZC is not output.
- When the lens moves up and down in less than 1-second, FRF is not output or the focus servo loop is abnormal.

Fig-1

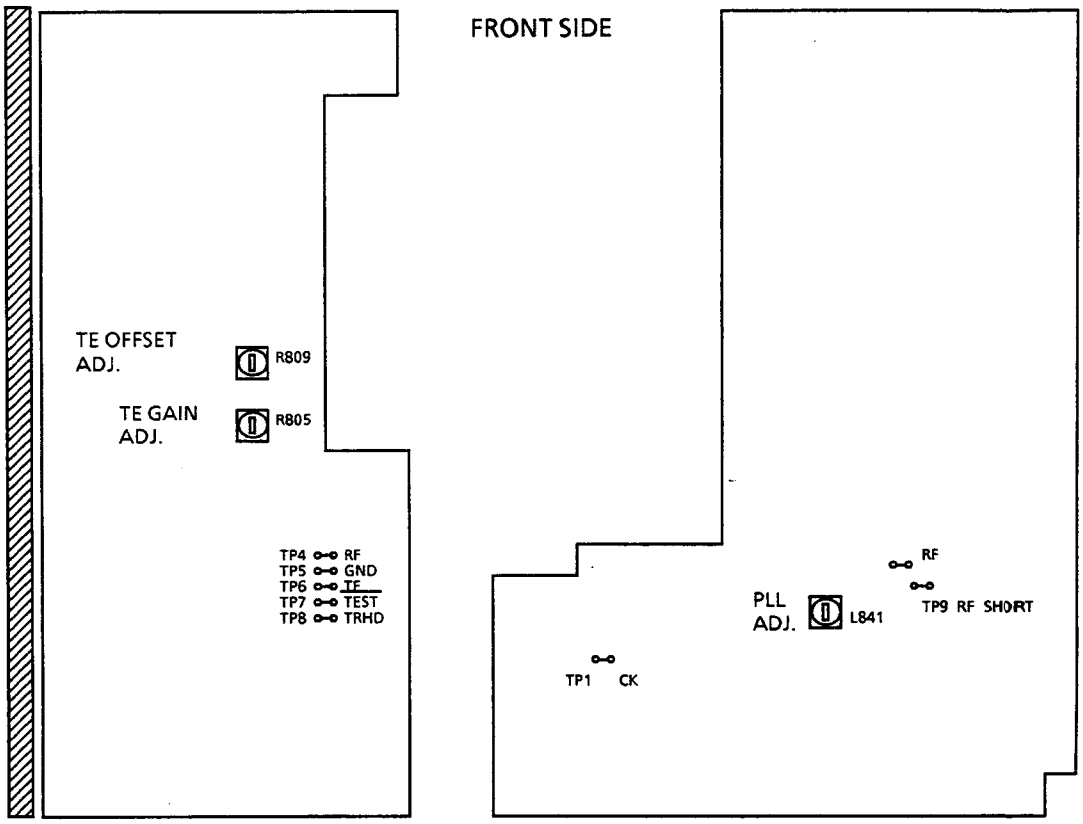


■ **When the tracking loop does not turn ON, check the tracking offset and align it to 0.**

Fig-2



Adjustment Procedures



* Use AX-MX70BK when adjusting.

1. PLL free-running adjustment

1) Measuring instrument
   Frequency counter
2) Adjusting procedure
   (1) Connect a frequency counter with TP1 (CK) and TP5 (GND) on the main PC board. Short circuit TP9 to TP5(GND).
   (2) Adjust L841 for setting the frequency counter's value becomes 4.320 ± 0.005MHz.

2. Tracking gain adjustment

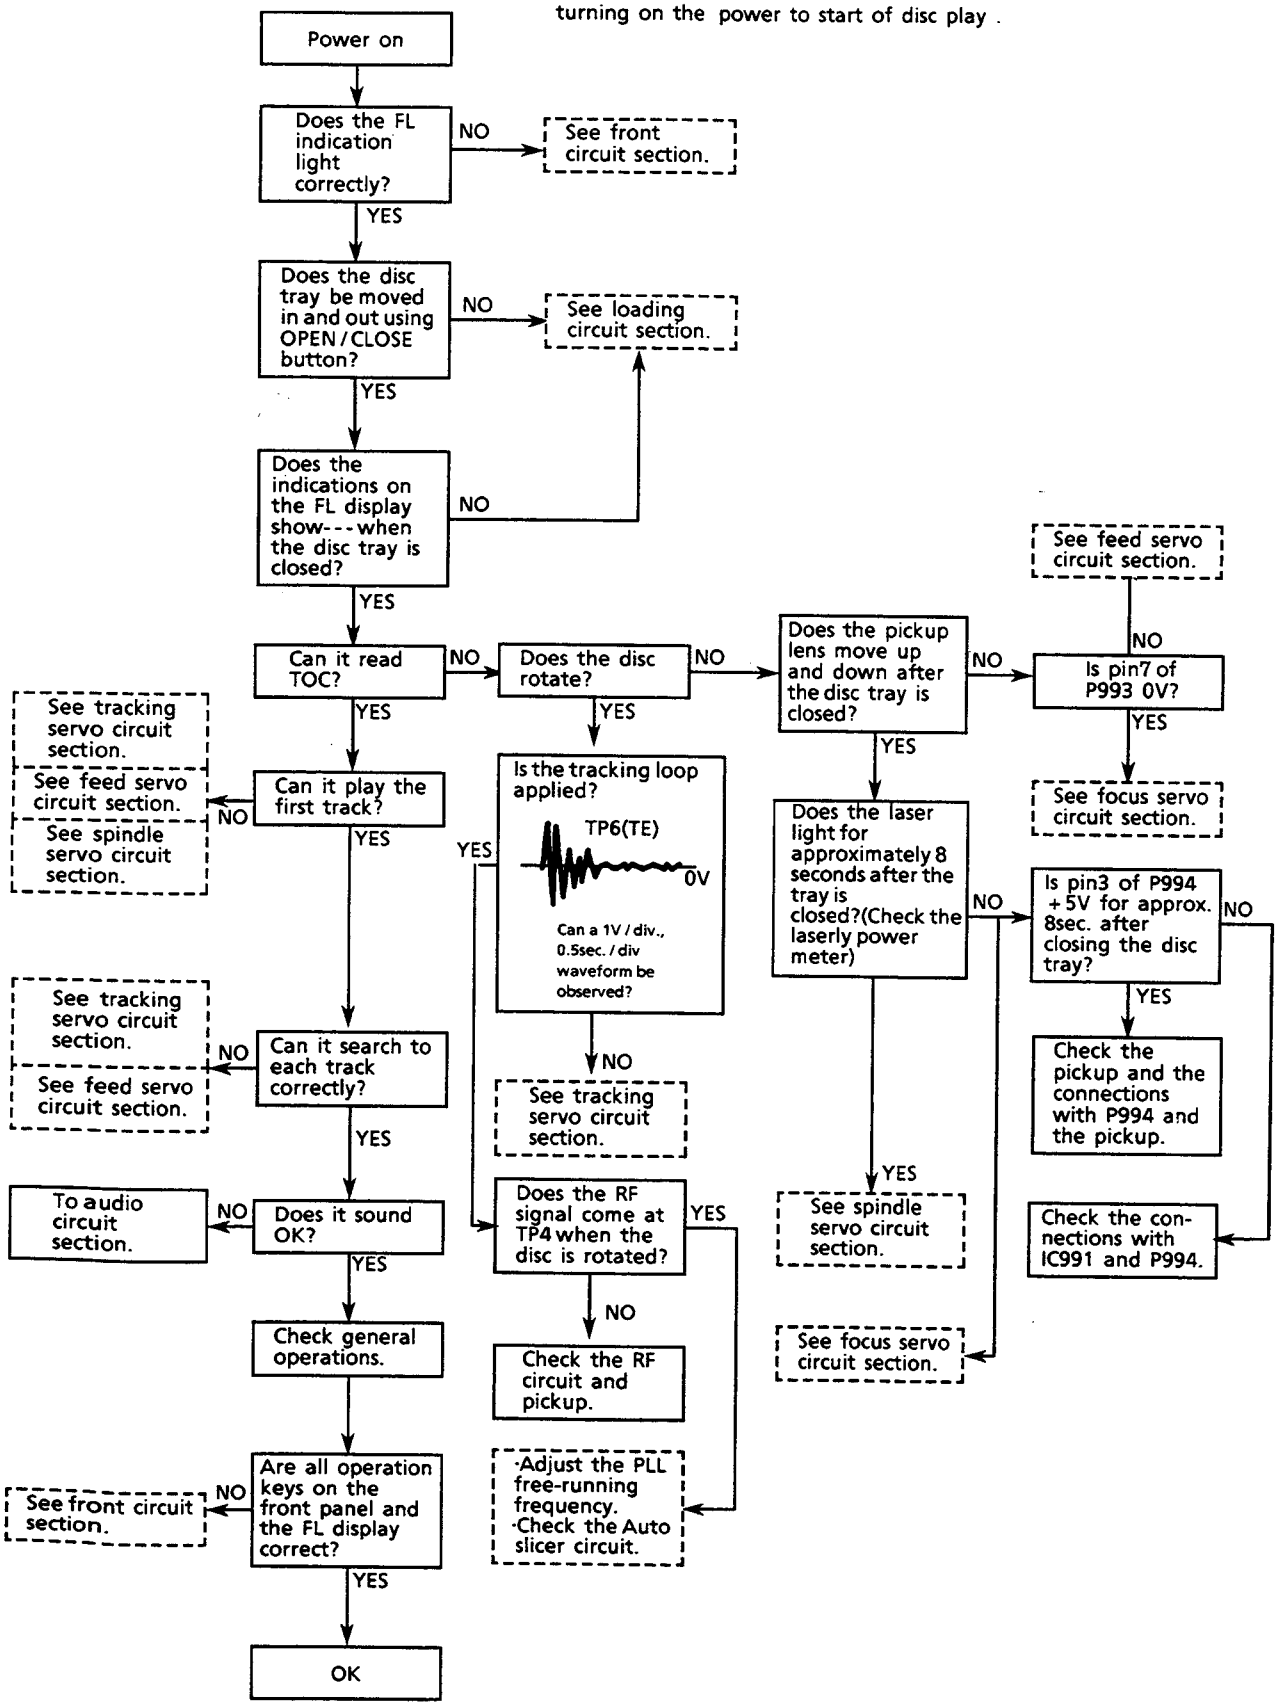
1) Measuring instruments
   Oscilloscope, Normal disc
2) Adjusting procedure
   (1) Connect an oscilloscope with TP6 (TE) and TP5 (GND) on the main PC board.
   (2) Play a disc.
   (3) Short circuit TP7 (TEST) to TP5 (GND).
   (4) Adjust R805 for setting tracking error signal becomes 2.0 V_{P-P}.

3. Tracking offset adjustment

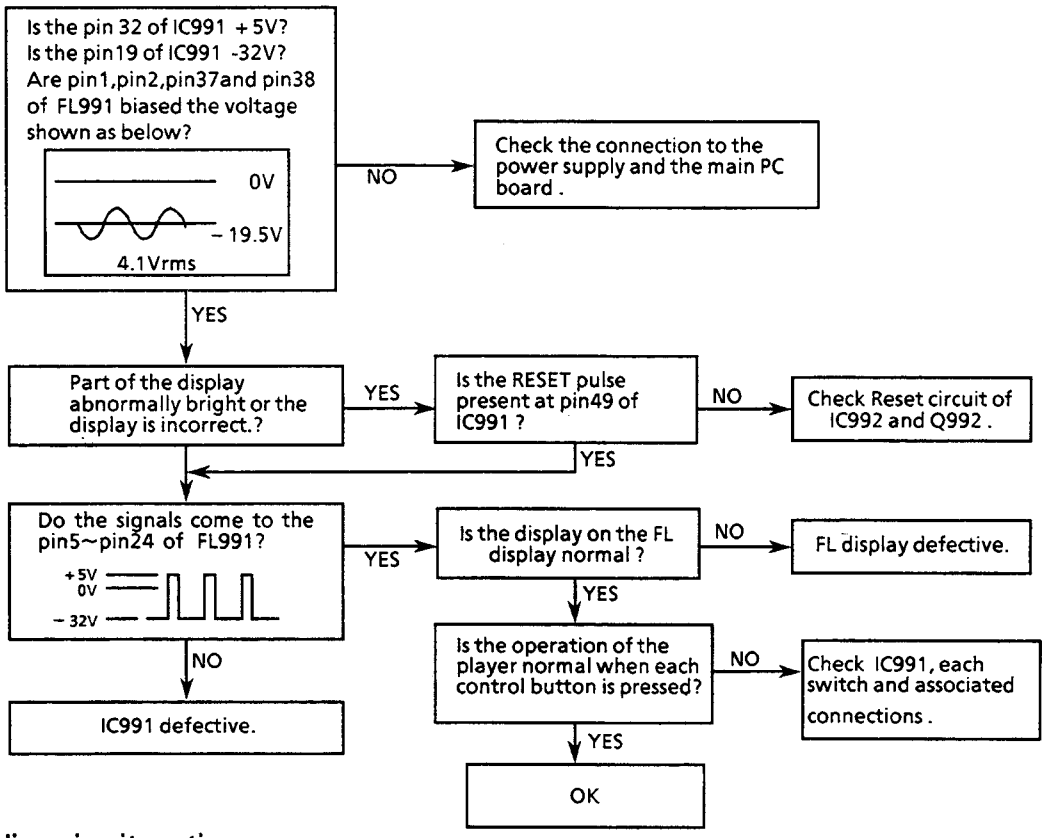
1) Measuring instruments
   Oscilloscope, Normal disc
2) Adjusting procedure
   (1) Connect an oscilloscope with TP6 (TE) and TP5 (GND) on the main PC board.
   (2) Play a disc.
   (3) Short circuit TP7 (TEST) to TP5 (GND).
   (4) Adjust R809 for setting the DC level of the tracking error (off set) becomes 0.

Troubleshooting

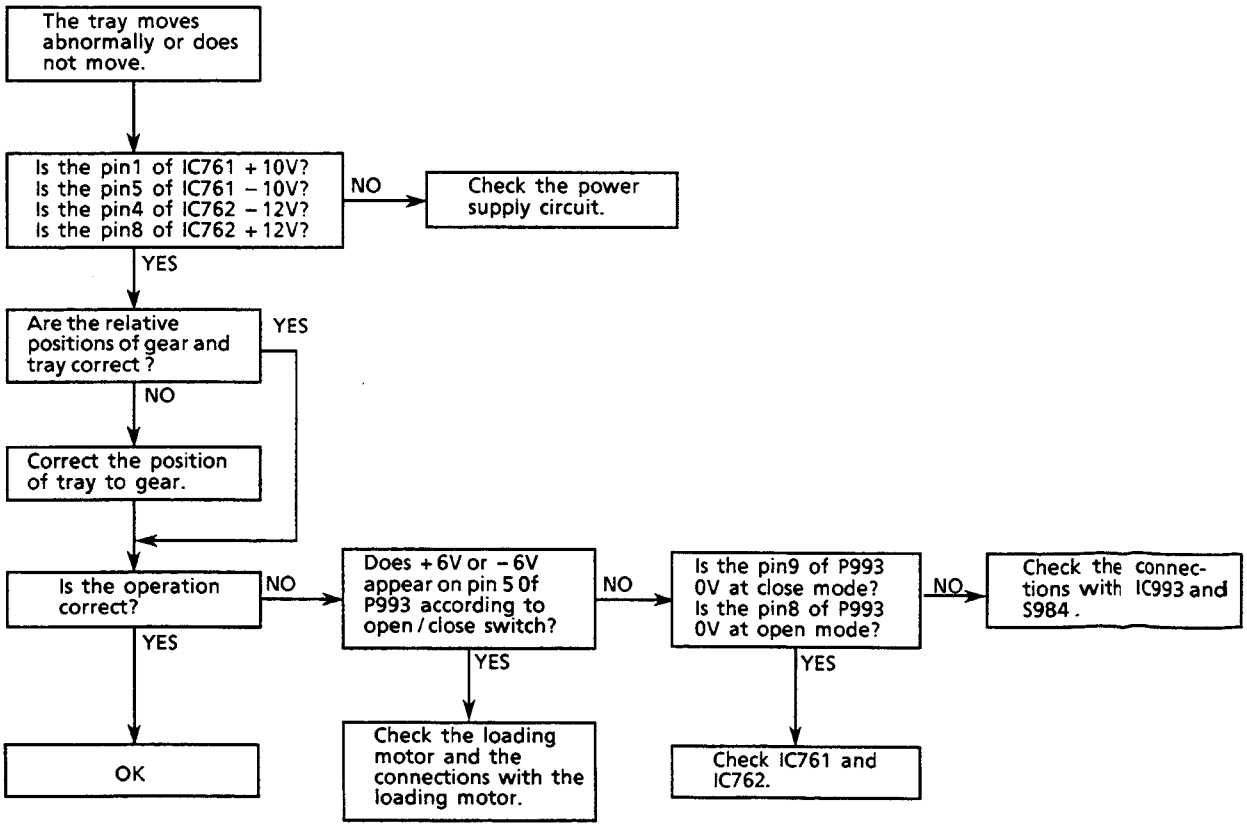
The following shows the status of the various circuits from turning on the power to start of disc play .



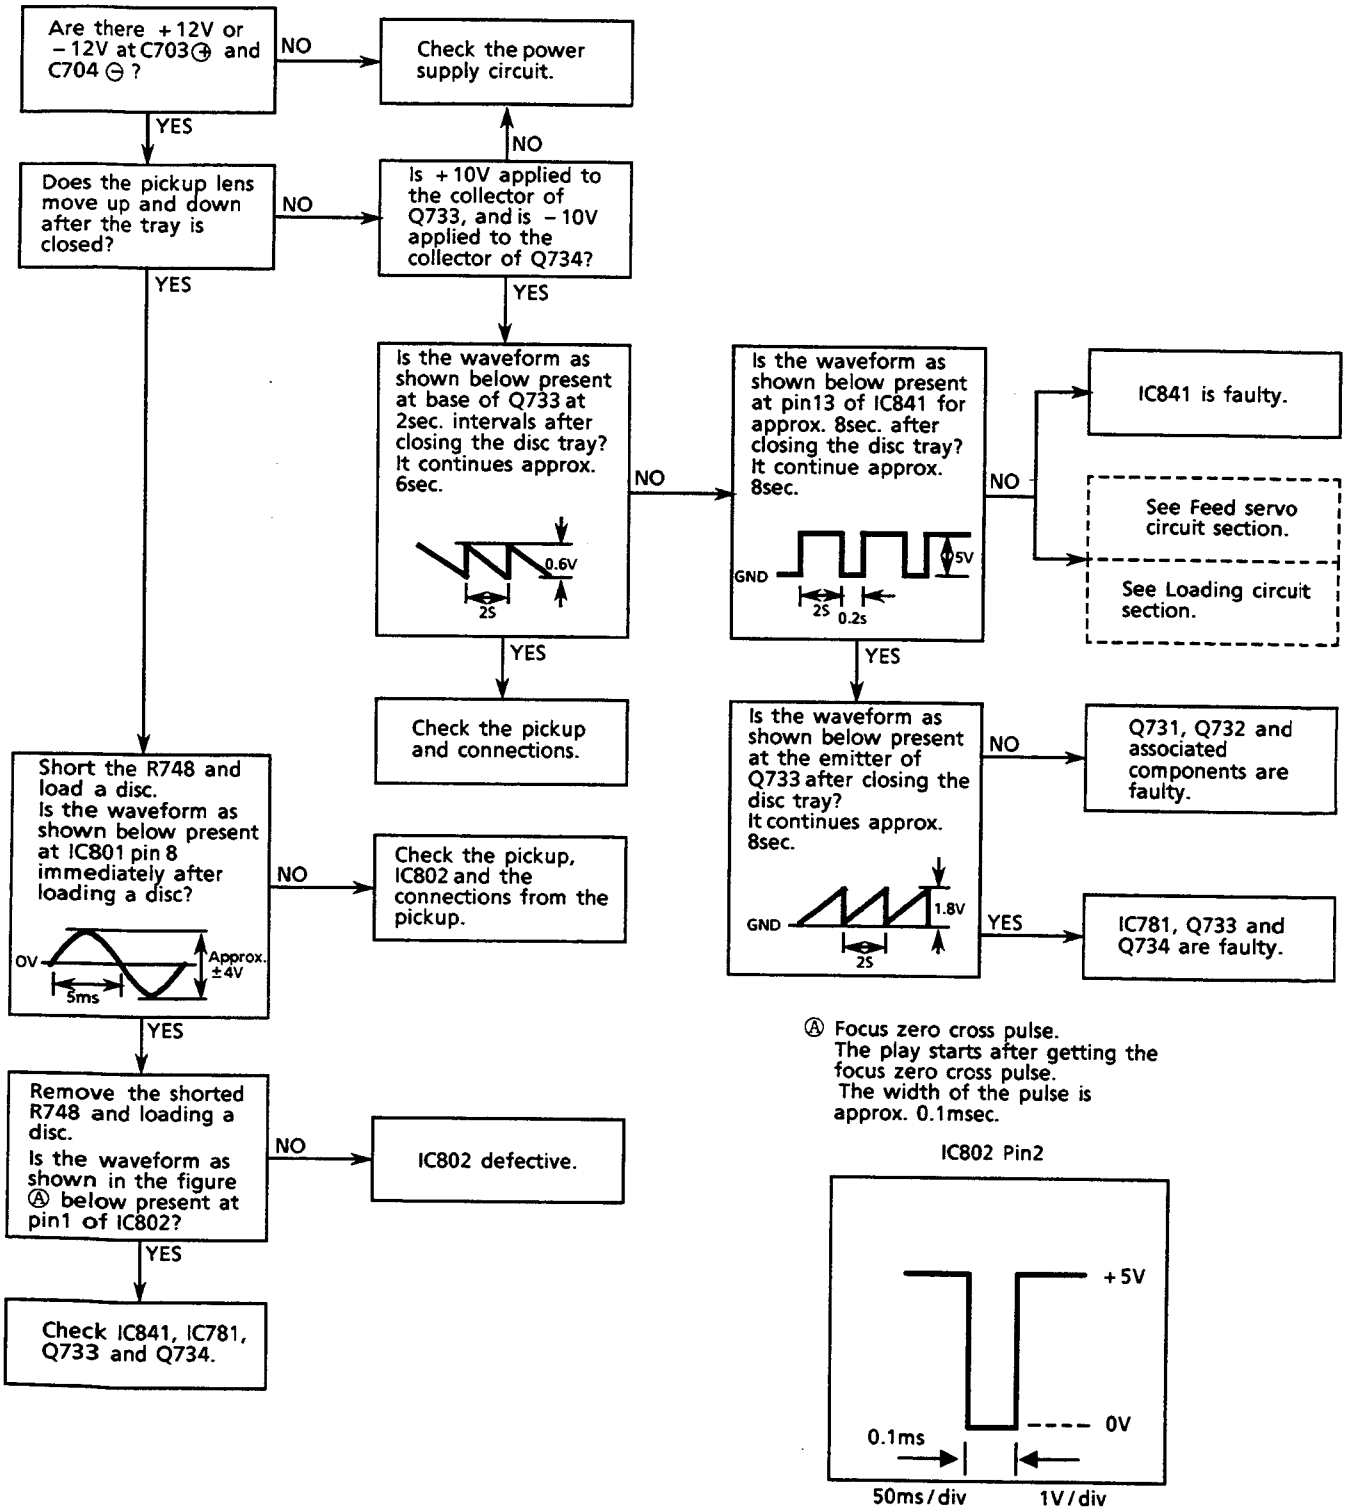
Front circuit Section



Loading circuit section



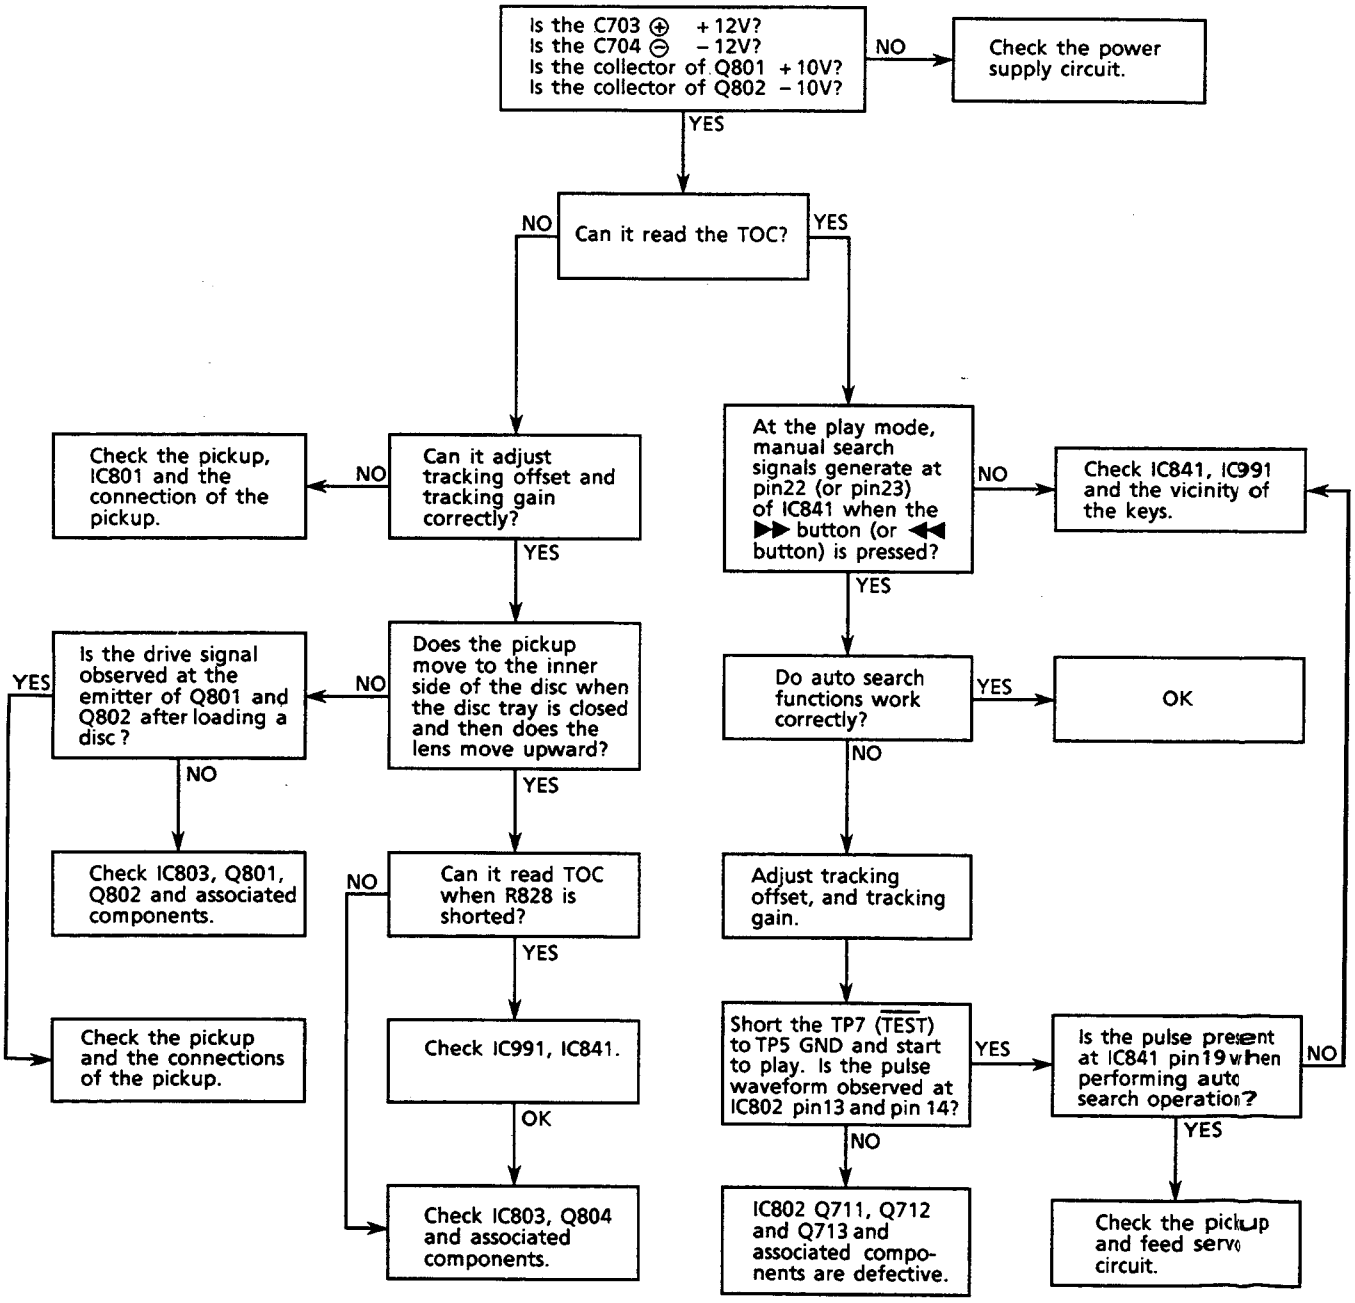
Focus circuit section



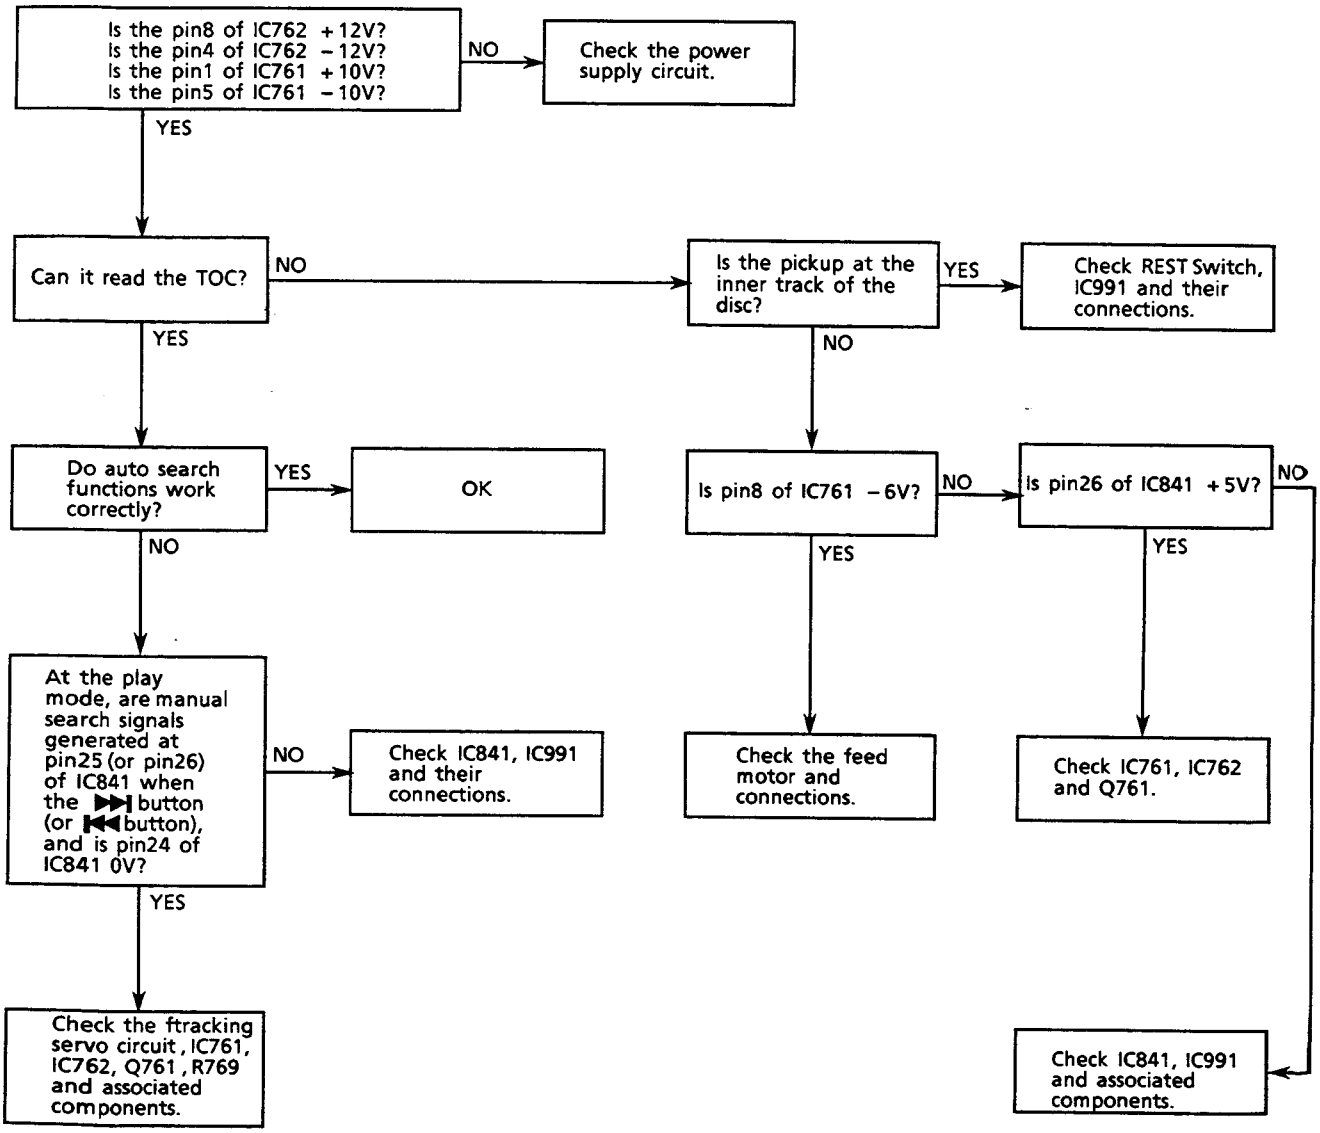
Ⓐ Focus zero cross pulse.
The play starts after getting the focus zero cross pulse.
The width of the pulse is approx. 0.1msec.

IC802 Pin2

Tracking circuit section



Feed circuit section



Spindle circuit section

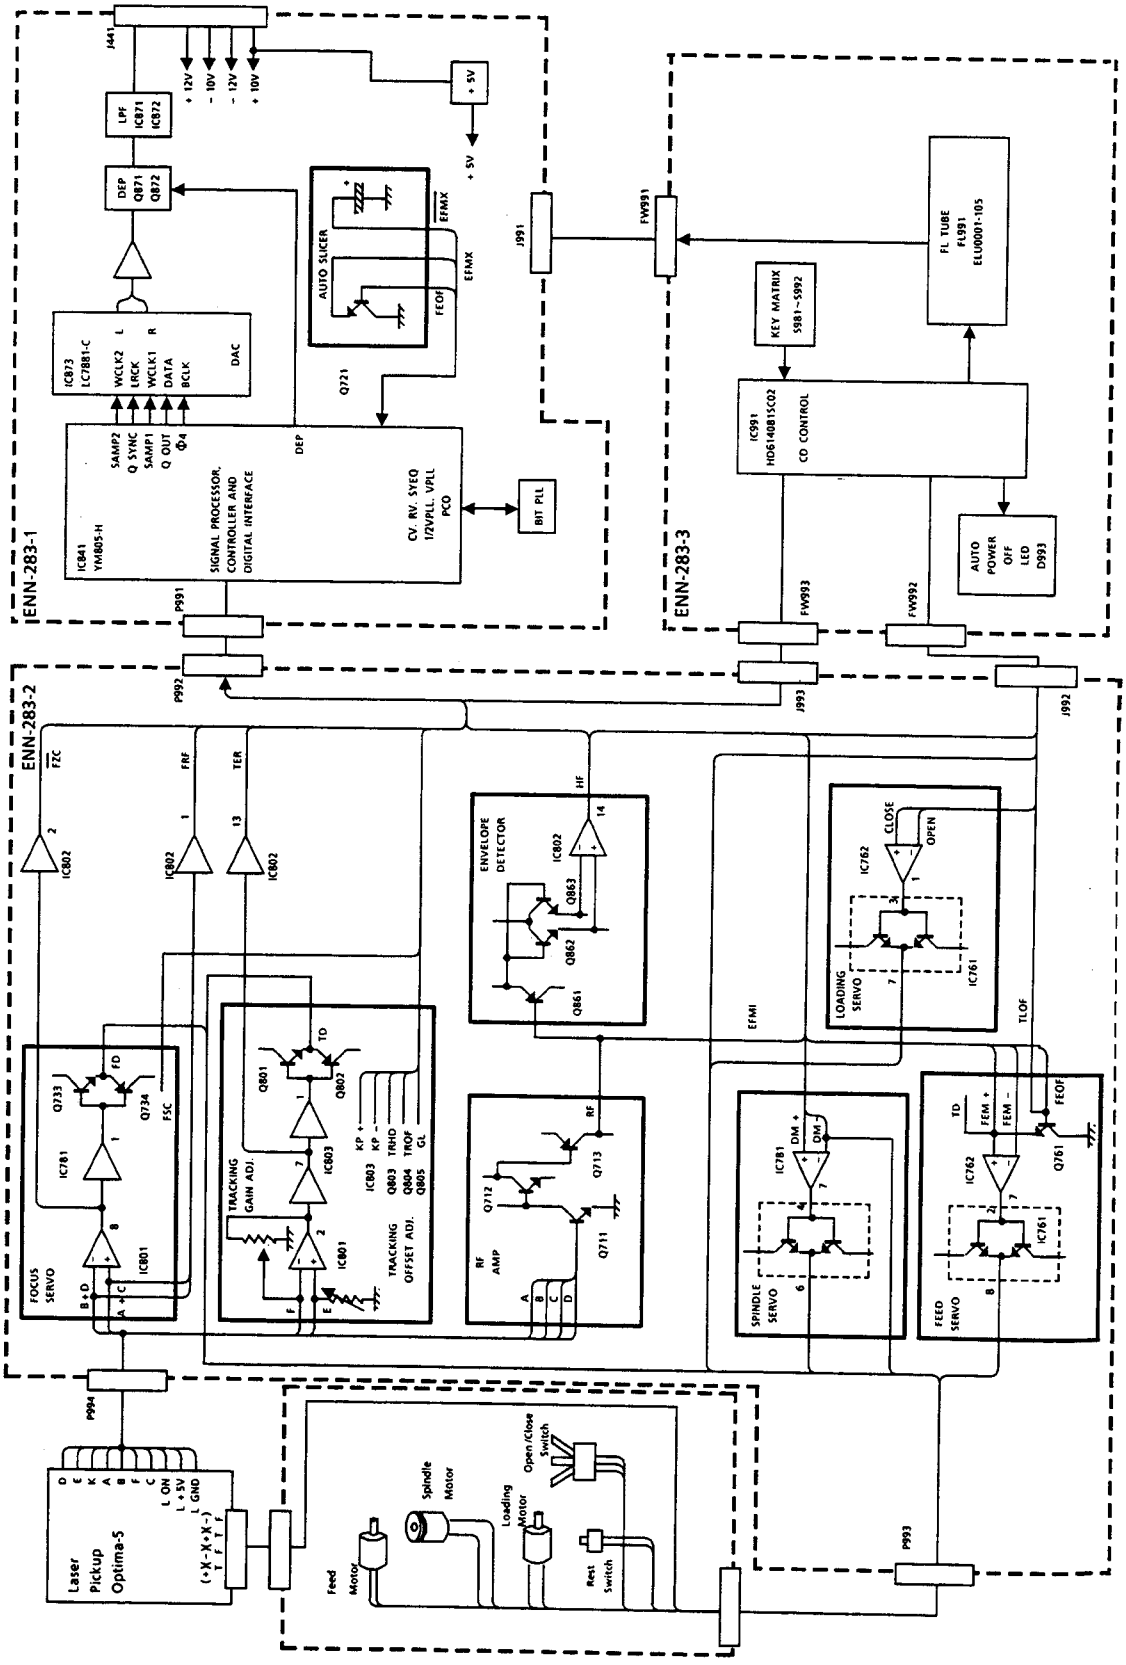
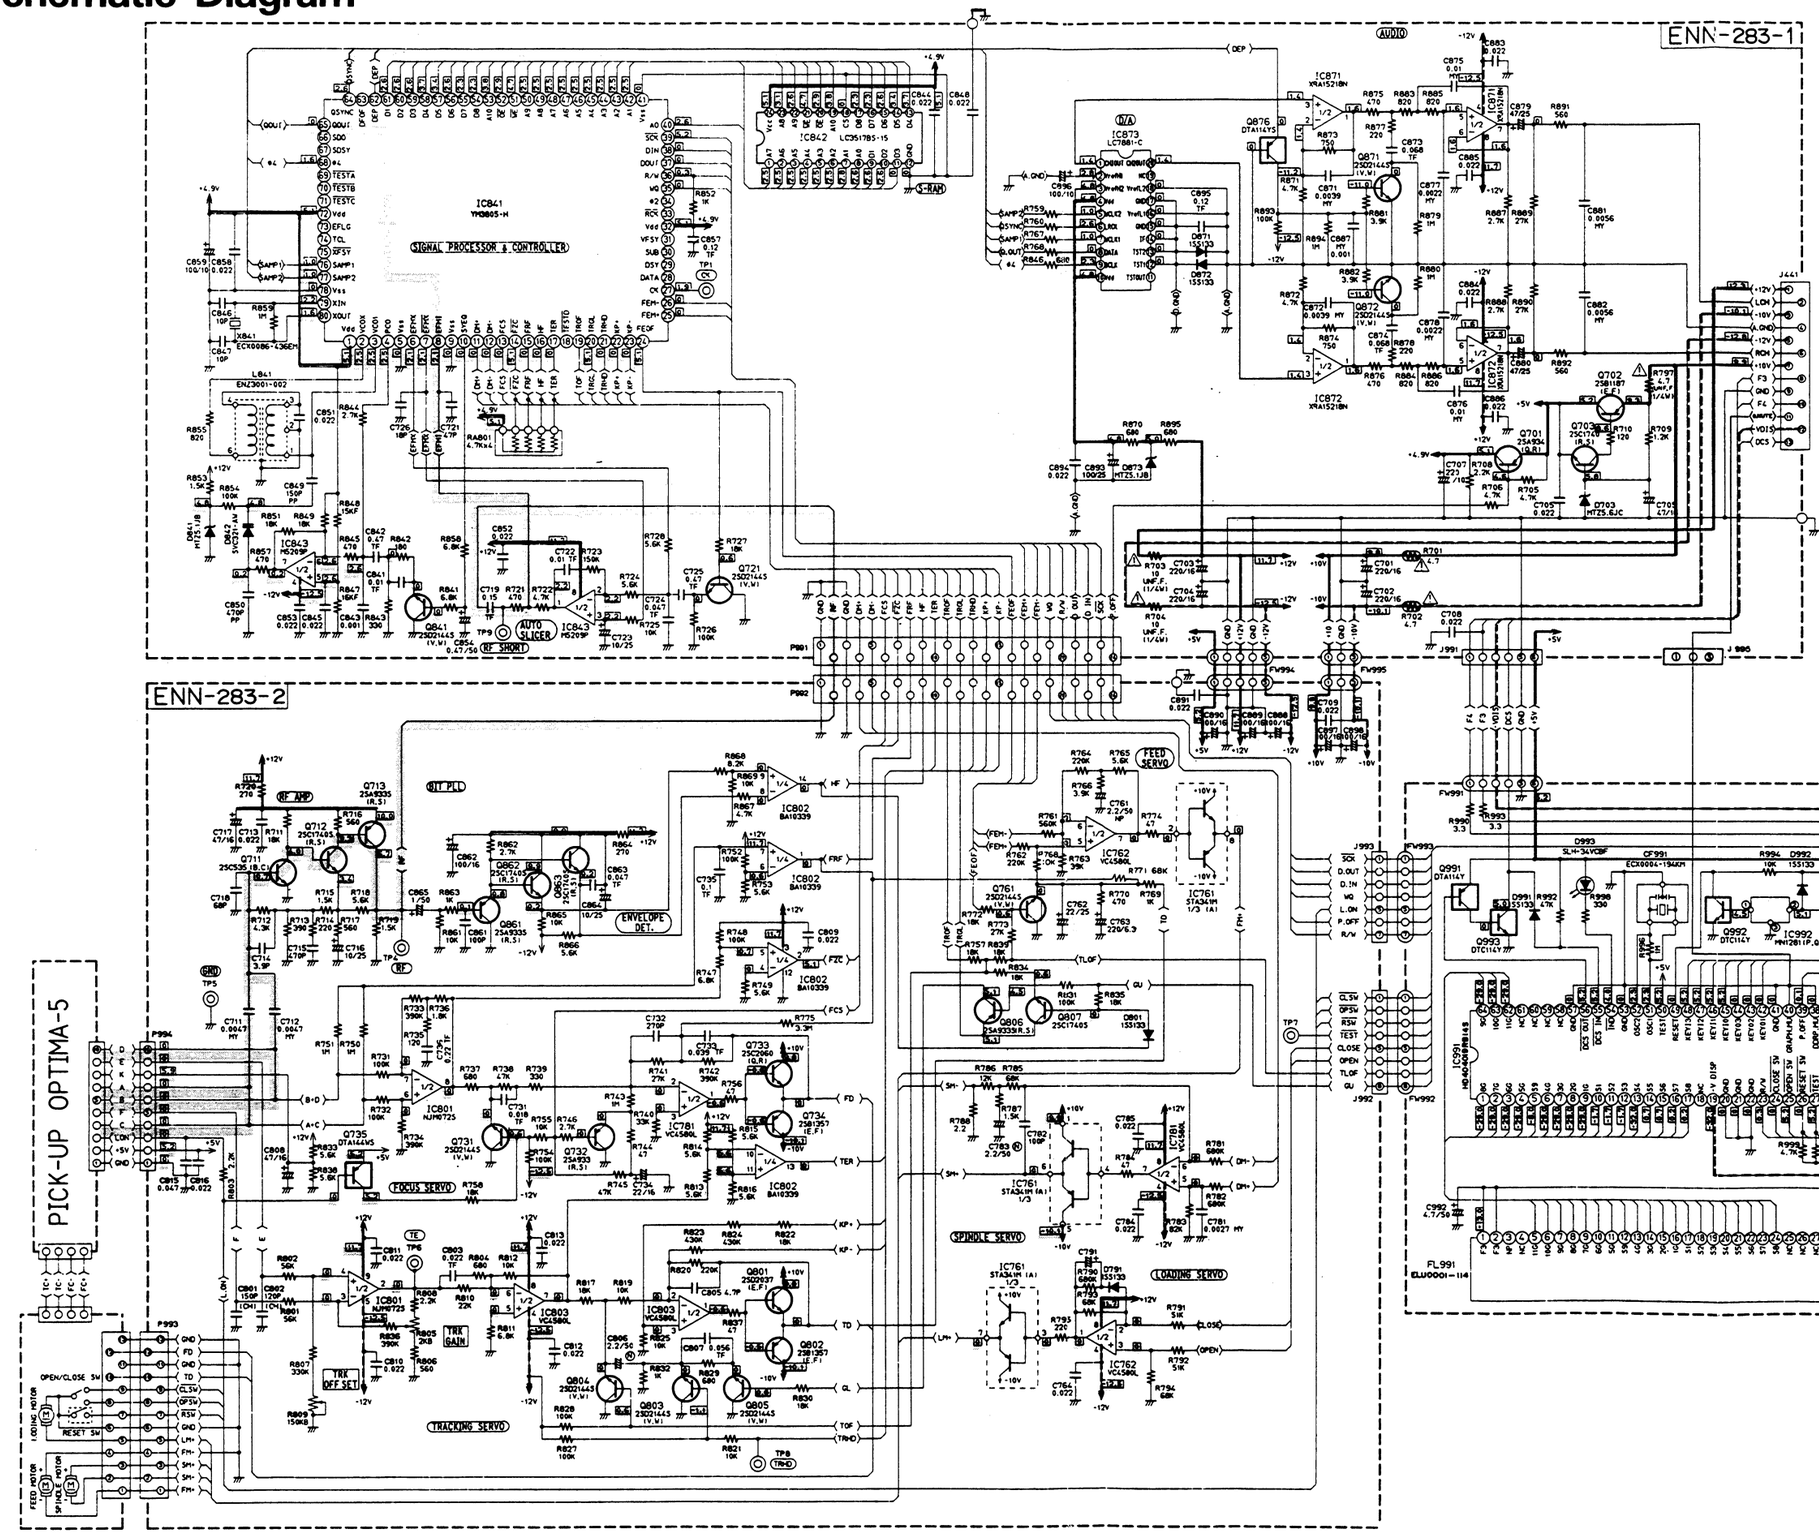
Block Diagram



Schematic Diagram



How to Use Schematic Diagrams

1. —— indicates the +B line.
2. ---- indicates the −B line.
3. ▒▒ indicates signal path.
4. □ indicates voltage value.
5. Parts marked with ⚠ and those in the shaded area ▒▒ are parts for safety.
   Be sure to use one with the specified part number.
6. This is the standard circuit diagram. The circuits and circuit constants are subject to change for improvement without notice.

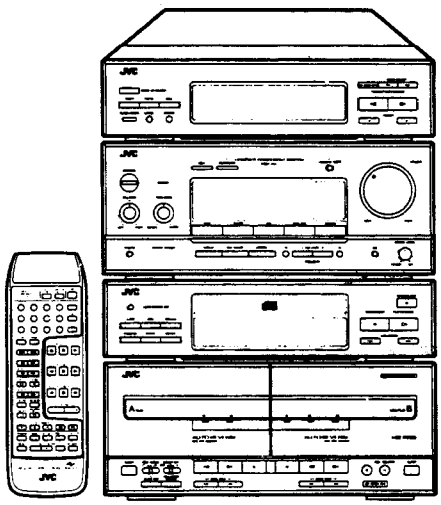
SERVICE MANUAL

COMPACT COMPONENT SYSTEM

MODEL No. DX-MX70BK



COMPACT disc DIGITAL AUDIO

This Service Manual is mainly for Accessories List , Packing Materials , Part Numbers and Instruction Book . About the disassembly procedure , adjustment procedure and so on , we issued another four Service Manuals for AX-MX70BK , FX-MX70BK , TD-MX70BK , and XL-MX70BK , so please refer to them.

Component

Compact component (DX-MX70BK) is a unit composing of the following units.

Model No.	Unit No.	Service Manual No.
DX-MX70BK	AX-MX70BK(Amplifier)	20244
	FX-MX70BK(Tuner)	20245
	TD-MX70BK(Cassette Deck)	20246
	XL-MX70BK(CD Player)	20247

No.20249
Mar.1991

WARNING: TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

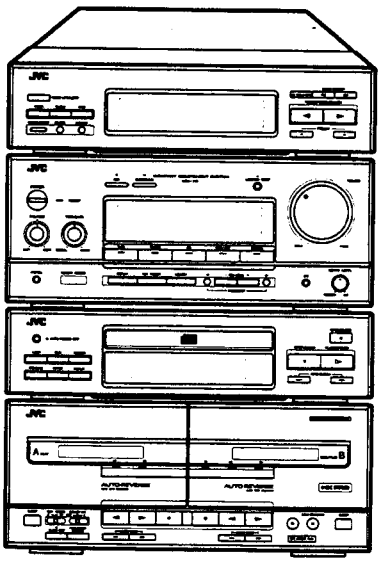
The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

IMPORTANT FOR LASER PRODUCTS

1. CLASS 1 LASER PRODUCT
2. **DANGER:** Invisible laser radiation when open and interlock failed or defeated. Avoid direct exposure to beam.
3. **CAUTION:** Do not open the top cover. There are no user serviceable parts inside the unit; leave all servicing to qualified service personnel.

Table of Contents

Introduction



This system produces a full, powerful bass sound.

- **With JVC's newly-developed forced air cooling system, Compact component system can produce the same high-quality bass sound as a large stereo system.**

Thank you for purchasing this JVC Compact Component Stereo System. We hope it will be valued addition to your home, giving you years of enjoyment.

Be sure to read this instruction manual carefully before operating your new stereo system. Here you will find all the information you need to set up and use the system.

For questions that cannot be answered in this manual, please contact your dealer.

Features

It has a variety of functions, which are equivalent to those of large, expensive stereo systems.

- Remote control of computerized 7-band SEA graphic equalizer.
- Programmable timers for setting recording, wake-up music, and fall-asleep music.
- Storage of 40 radio stations (FM and AM) in memory.
- Fade-out of last track during direct CD-to-tape recording.
- CD tracks can be recorded on both sides of a cassette tape without splitting songs at the end of a side.
- CD tracks can be played back or recorded on both sides of a cassette tape in any order.
- Input terminals for connecting a turntable, a Digital Audio Tape (DAT) Deck, and the sound portion of Video Cassette Recorder (VCR).

About This Manual

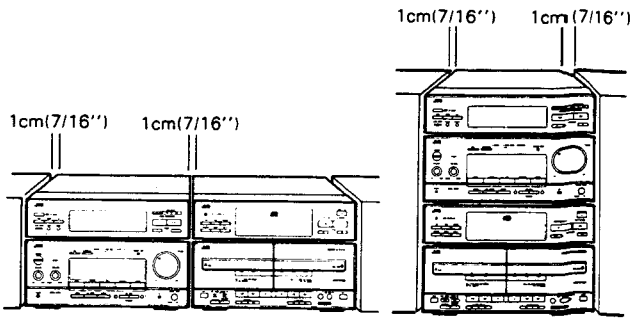
This instruction manual will help you with the following:

- Connecting the components of the system, installing the antennas, and connecting other components such as a turntable or VCR to the system.
- Learning the operations of the components of the system (Amplifier, CD Player, Tape Deck, Tuner, and the Remote Controller).
- Learning additional functions of the system, such as using the timers, using the SEA graphic equalizer, presetting broadcast stations in memory, and using the various recording capabilities.
- Trouble-shooting, if a problem should occur.

Laying Out the System

There are two ways to lay out the system as shown below.

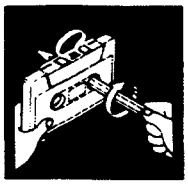
- Leave a space of at least one cm on both sides of the amplifier and keep the back at least 10 cm from the wall for ventilation.



Care and Handling

You must handle your compact discs, cassette tapes, and tape deck carefully to keep them for a long time.

Cassette Tape



■ If the tape is loose in the cassette, take up the slack by inserting a pencil in one of the reels and rotating.
If the tape is loose, it may get stretched, cut, or caught in the cassette.

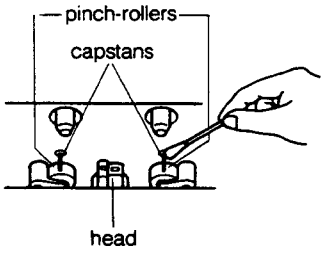
■ Do not touch the tape surface.

■ Do not store the tape:
— In dusty places
— In direct sunlight or heat
— In moist areas
— On a TV or speaker
— Near a magnet

Tape Deck

■ If the head, capstans, and pinch-rollers of the tape deck become dirty, the following will occur:
— Impaired sound quality
— Discontinous sound
— Fading
— Incomplete erasure
— Impossible to record

■ Clean the head, capstans, and pinch-rollers with a cotton swab moistened with alcohol.

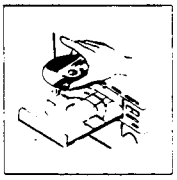


■ If the head becomes magnetized, it will produce noise or lose high frequencies.

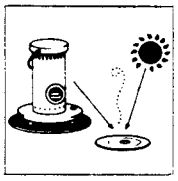
To demagnetize the head, turn off the system, and use a head demagnetizer (available at electronics and record shops).

Compact Discs

■ Remove the CD from the case by holding it at the edges while pressing the center hole lightly.
■ Do not touch the shiny surface of the CD, or bend the CD.



■ Place the CD in the tray with the label up.



■ Put the CD back in its case after use to prevent warping.
■ Avoid exposure to direct sunlight, temperature extremes, and moisture.

■ If the CD becomes dirty, wipe it with a soft dry cloth in a straight line from center to edge.

Caution! Do not use any solvent (for example, conventional record cleaner, spray, thinner, benzine, etc.)

Only use compact-discs bearing the mark shown below.

COMPACT disc DIGITAL AUDIO

Important Notes

1. Installation
- Select a place which is level, dry, and neither too hot nor too cold (between 5 and 35 degrees Celsius/41 and 95 degrees Fahrenheit).
- Be sure there is adequate ventilation; poor ventilation may cause the unit to malfunction.
- Leave sufficient distance between the receiver and your TV.

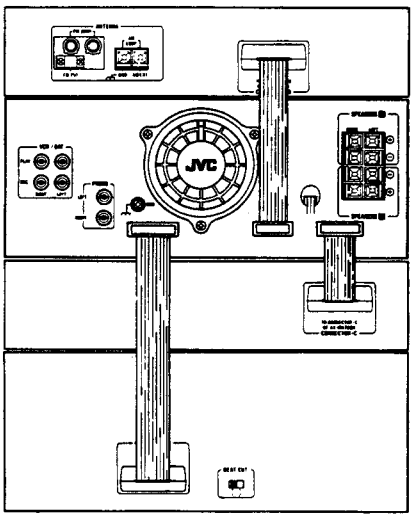
2. Power
- Do not handle the power cord with wet hands!
- When unplugging from the wall outlet, always pull the plug, not the power cord.

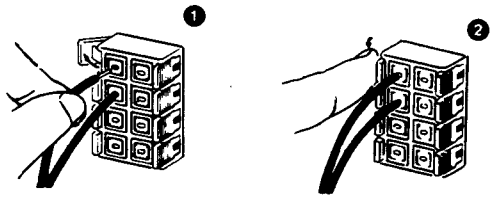
3. Malfunctions, etc.
- Do not insert any metallic objects into the receiver.

Caution

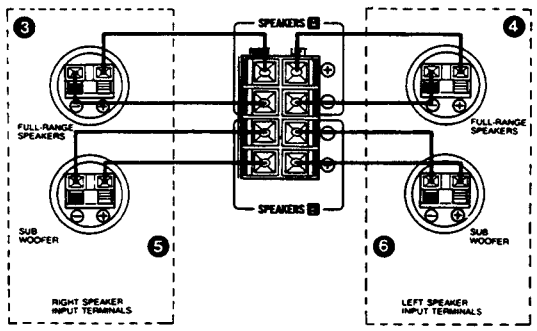
To reduce the risk of electrical shocks, fire, etc.:
1. Do not remove screws, covers or cabinet.
2. Do not expose this appliance to rain or moisture.

Connecting the System Components





Example:



Connection Notes

- Before you plug in the system, you must make all the necessary connections.

Connecting the Four Stereo Components

- Connecting the Tuner, Amplifier, CD Player, and Tape Deck.

Connect three ribbon cables extending from the tuner, CD player, and tape deck to the amplifier.

- If the system does not work well or needs repairing, please take all the components with you to the nearest agent.

Connecting the Speakers

Speaker Terminals

❶ When connecting speakers, open each terminal and insert the end of the speaker wire as shown.
❷ Close the terminals as shown to clamp the speaker wires in place.

SPEAKERS A

Connect the Full Range Speakers to the SPEAKERS A terminal on the amplifier as follows.

❸ Connect the (+) and (−) terminals of the right-side Full Range Speaker to the upper (+) and (−) terminals marked RIGHT on the amplifier.
❹ Connect the (+) and (−) terminals of the left-side Full Range Speaker to the upper (+) and (−) terminals marked LEFT on the amplifier.

SPEAKERS B

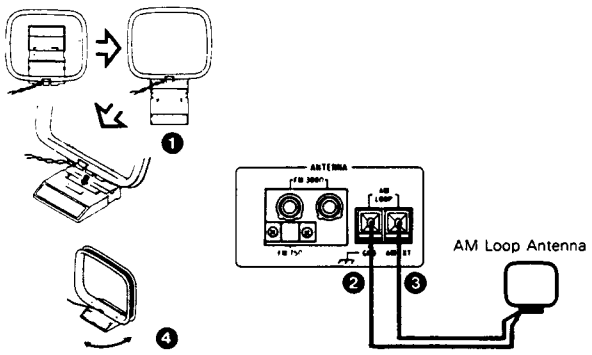
Connect the Subwoofers to the SPEAKER B terminal on the amplifier as follows.

❺ Connect the (+) and (−) terminals of the right-side Subwoofer to the lower (+) and (−) terminals marked RIGHT on the amplifier.
❻ Connect the (+) and (−) terminals of the left-side Subwoofer to the lower (+) and (−) terminals marked LEFT on the amplifier.

Note: Connect speaker cables to terminals matching cable colors with terminal lever color.

- Use speakers with the correct inpedance.
  The correct impedance is indicated on the rear panel of the amplifier.

AM and FM Antenna Connections



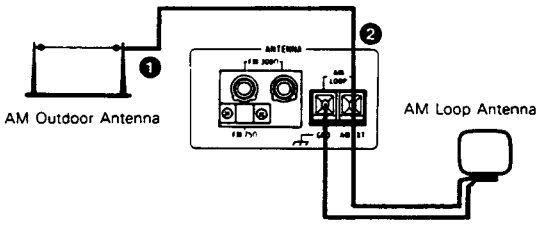
To receive radio broadcasts, you will have to connect AM and FM antennas to the Tuner.

An AM loop antenna is included with your system.

FM antennas use two types of cable connections: 75-ohm cables have a round coaxial connection while 300-ohm cables

AM Loop Antenna

1. Fold out the loop from the antenna base.
2. Connect one antenna wire to one of the AM LOOP terminals.
3. Connect the remaining antenna wire to the other AM LOOP terminal.
   Note: These two terminals open and close the same way as the speaker terminals.
4. Adjust the loop antenna as needed to get the best reception.

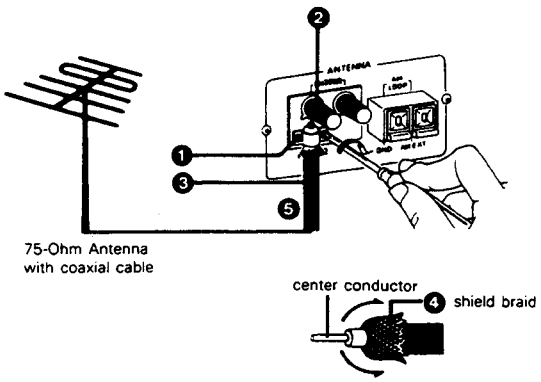


AM Outdoor Antenna

If your AM broadcast reception is unsatisfactory, you should connect an AM outdoor antenna in addition to the loop antenna.

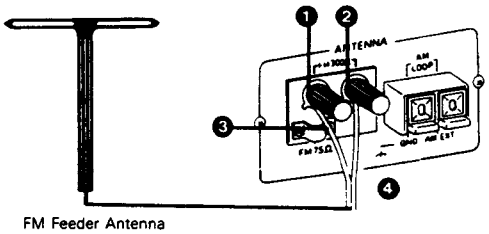
Important! The AM loop antenna must be installed to receive AM broadcasts. Do not disconnect the loop antenna when installing an outdoor antenna.

1. Install a single vinyl-covered antenna wire outdoors. The antenna wire should be about 16 to 40 feet (5 to 12 meters) long.
2. Connect one end of the antenna to the AM loop terminal marked AM EXT.
   Note: Except for the connection, make sure no uninsulated antenna wire touches the rear panel of this system. Otherwise, you might not receive AM broadcasts.



FM 75-Ohm Antenna Cable

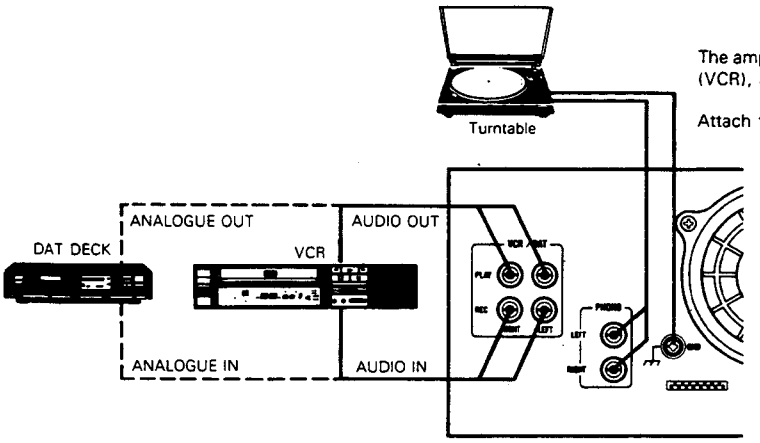
1. Loosen the screws holding the bracket.
2. Loosen the cap of the 300/75-ohm terminal.
3. Insert the round antenna cable through the bracket from below.
4. Make sure that the shield braid on the cable contacts the bracket, and that the center conductor of the cable contacts the 300/75-ohm terminal.
5. Tighten the bracket screws and the cap on the 300/75-ohm terminal.



FM 300-Ohm Antenna Cable

1. Loosen the cap on the 300/75-ohm terminal.
2. Loosen the cap on the 300-ohm terminal.
3. Connect the two conductors of the antenna cable to the 300/75-ohm terminal and the 300-ohm terminal.
4. Tighten the caps on both terminals.
   Note: Whether you use the 75-ohm or 300-ohm cable, make sure the antenna conductors do not touch any other terminals on the rear panel. This could cause poor reception.

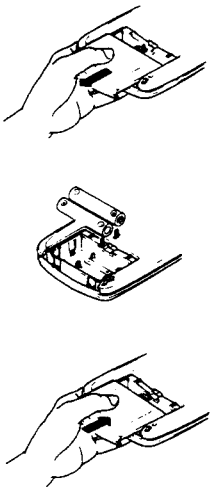
Connecting Other Components



The amplifier can also be connected to a turntable, a Video Cassette Recorder (VCR), and a Digital Audio Tape (DAT) Deck.

Attach these components as shown.

Installing the Batteries in the Remote Controller

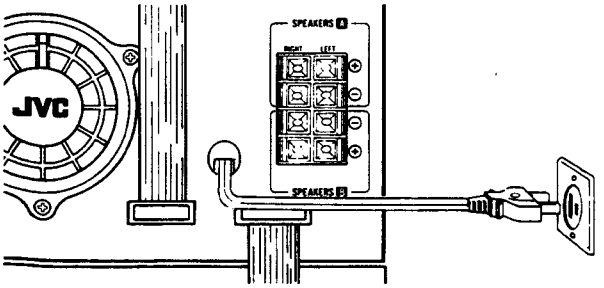


1. **Remove the battery compartment lid.**
   Press the lid and slide it in the direction of the arrow.
2. **Insert the batteries.**
   Use two UM-4/AAA/R03 size batteries. Make sure the + and − polarities on the batteries and compartment are the same.
3. **Attach the lid.**
   Press the lid and slide it in the direction of the arrow.

Note: Batteries installed incorrectly may burst or leak. Pay attention to the following:

- When the Remote Controller is not in use for a long period of time, remove the batteries.
- Do not mix old and new batteries.
- Do not mix batteries of different types, even if their shapes are the same.
- When batteries become weak, the operating distance of the Remote Controller is greatly reduced and you will need to replace the batteries.

AC Power Connection



Plug the power cord on the back of the amplifier into a 120 Volt, 60 Hz AC household electrical outlet.

Caution: To prevent electric shock, turn all stereo components off before you install or remove power cords.

Important! Before you plug the power cord into an outlet, make sure all stereo components are connected correctly.

Using the Amplifier

Using the Power Switch

1. Press the POWER switch to turn on the stereo system.

When the POWER switch is not pressed and the power cord is plugged in, the stereo is in STANDBY mode and STANDBY indicator lights. In STANDBY mode, the stereo uses a small amount of power (13 watts) for the clock, memory contents, and any timers which are set.

2. To disconnect power completely, unplug the power cord.

Adjusting the Volume Controls

Volume
Turn the VOLUME knob to adjust the volume level of the speakers or headphones.

- Connect headphones to the PHONES jack on the amplifier for listening through headphones. No sound will be produced from the speakers.
- Turn the MIXING LEVEL knob to the SOURCE position unless a microphone is used.

Balance
Turn the BALANCE knob to adjust the left-and-right sound balance in the speakers or headphones.

Twin Bass
Turn the TWIN BASS knob to adjust the output level of the Subwoofers. Turning this control toward MAX will boost the low frequencies.

Using the SEA Function

You can think of the SEA function as an enhanced version of the conventional Bass and Treble knobs on most sound systems. Use it to alter the tone of the source (for example, CD, tape, or broadcast) by increasing or decreasing the levels of selected frequency ranges.

The total frequency range that the amplifier can reproduce (from the lowest-pitched sounds to the highest) is divided into seven sections: 63Hz, 160Hz, 400Hz, 1kHz, 2.5kHz, 6.3kHz, and 16kHz.

By making certain frequency ranges louder or softer, you can change the sound to suit your taste. You can also choose from six pre-programmed SEA settings.

Controlling Sound with the SEA Function

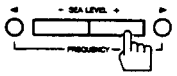
1. Press the SEA button on the Amplifier.

The SEA indicator lights up.

2. Press the FREQUENCY ◀ or ▶ button on the Amplifier to select one of the seven frequency ranges to work on.

Press the FREQUENCY ▶ button to select the next higher frequency and the ◀ button for the next lower frequency.

3. Press the SEA LEVEL button (+ or −) on the Amplifier to set the level for the selected frequency range.



- Press the + button to increase sounds in the selected frequency range, and pressing the − button to decrease sounds in this frequency range.
- Repeat steps 2-3 for each frequency range.

Note: If you want to compare the new sound you have created with the way the system sounded before, press the SEA button on the Amplifier and listen to a selection of music. Then press the SEA button again to hear the new sound.

4. Press the MEMORY button on the Amplifier to store your SEA pattern in memory.

Using an SEA Pattern

You can use the SEA pattern you created, or one of the six pre-programmed SEA patterns, each of which has its own sound characteristics.

The pre-programmed SEA patterns are:

ROCK	Boosted low and high frequencies.
JAZZ	Gives a feeling of a live atmosphere. Good for acoustic music.
POPS	Good for vocal music.
CLASSIC	Set for wide and dynamic sound stereo systems.
H.PHONE	When creating tapes for headphone use.
CAR	When creating tapes for use in a car stereo.

1. Press the SEA button on the Amplifier.

The SEA indicator light goes on.

2. Press the SEA PRESET button to select an SEA Pattern.

Each press of the SEA PRESET button changes the pattern displayed in the following order:

▶ ROCK ▶ JAZZ ▶ POPS ▶ CLASSIC ▶ H. PHONE
▶ CAR ▶ MANUAL (back to the beginning)

Changing the SEA Display

The display on the amplifier indicates the sound being played back in seven frequency bands. Five display modes (PEAK HOLD, PEAK LINE, SHOWER, MOUTH, SHUTTER) are available. Every time the DISPLAY button is pressed, the display mode changes in the following order:

▶ PEAK HOLD ▶ PEAK LINE ▶ SHOWER ▶ MOUTH
▶ SHUTTER (back to the beginning)

Using Turntable, VCR and DAT

In addition to the CD Player, Tuner, and Cassette Tape Deck, the amplifier can also play a turntable, a VCR, and a DAT.

1. **To play records, press the PHONO button on the Amplifier.**
   To play VCR or DAT, press the VCR/DAT button on the Amplifier.

2. **To operate the each component, refer to its instruction manual.**
   - You can operate a JVC VCR and DAT using the remote controller. See page 23 for more information.

Playing Back with a Surround Sound Effect

You can enjoy surround sound only with two speakers.

Press the SURROUND button.

The indicator light will go on.

Mixing the Microphone Sound

You can sing or narrate to the music with the optionally available microphone connected to the MIC jack.

1. **Connect the microphone.**
   - Set the MIXING LEVEL knob to SOURCE before connecting or disconnecting the microphone.
2. **Play your desired source.**
3. **Adjust the volume balance between the music and microphone using the MIXING LEVEL knob.**

Note: Raising the MIXING LEVEL too high may cause howling.
- Do not hold the microphone toward the speaker or move it away from the speaker.
- Lower the microphone level with the MIXING LEVEL knob.
- Lower the volume level with the VOLUME knob.

- When the microphone is no in use, set the MIXING LEVEL knob to SOURCE.

Using the LEARNING CSRP Feature

The LEARNING CSRP (Compu-link Source Related Preset system) is the state-of-art electronic feature that learns VOLUME and other control settings on each source. This was previously done automatically each time a difference source was played back or each time the system was turned off. It remembers the last five settings of each parameter you has set and automatically recalls the most frequently used ones.

This feature lets you invoke your favorite control settings by simply selecting a source (TAPE, TUNER, CD, VCR/DAT, PHONO) without repeating many settings each time sources are changed.

When the LEARNING CSRP button is set to ON, the following parameters are learned each time a difference source was played back or the system was turned off.

- Volume level
- SEA settings (Preset Pattern and display mode)

They will be set based on the last five settings.

- SEA ON/OFF
- SURROUND ON/OFF

They will be set to the last setting.

Press the LEARNING CSRP button

The indicator light will go on.

- When sources are switched, the VOLUME level, SEA, and SURROUND are automatically set.
- When turning the POWER off, the VOLUME control automatically turns toward MIN.
- When turning the POWER on again, the VOLUME control automatically turns up to the position set by the LEARNING CSRP function.

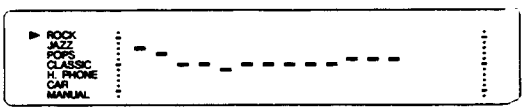
Using the Loudness Function

The loudness function will makes up for loss of the human auditory sensation when the sound is low.

1. **Press the SEA button to turn the SEA on.**
2. **Press the SEA PRESET button to select a preset pattern other than MANUAL.**
3. **Press the LEARNING CSRP button.**
   The indicator light will go on.

- If the volume level is lowered:
  Low and high frequencies are boosted to make the sound powerful and distinct.

- If the volume level is raised:
  The SEA setting becomes similar to the preset pattern and the sound becomes natural.



Using the CD Player

Starting Playback

1. **Press the OPEN/CLOSE button on the CD Player.**

The CD tray slides out.

2. **Place a CD (with the label facing up) in the tray, and press the OPEN/CLOSE button again.**

The tray slides back in.

3. **Press the PLAY/PAUSE button on the CD Player, or the CD button on the Amplifier.**

The CD Player begins playing the first track on the CD.

Stopping Playback and Ejecting the CD

1. **Press the STOP/CLEAR button.**

2. **Press the OPEN/CLOSE button, and take the CD out of the tray.**
3. **Press the OPEN/CLOSE button again to close the tray.**

Stopping and Restarting Playback

1. **Press the PLAY/PAUSE button.**

Playback stops temporarily.

2. **Press the PLAY/PAUSE button again.**

Playback restarts.

Note: When Tuner is selected as the source, Cd OFF is displayed, and only the OPEN/CLOSE disc tray and PLAY/PAUSE buttons can be used. To use other buttons, press the CD button on the Amplifier or the PLAY/PAUSE button on the CD Player first.

Selecting a Track to Play

Press the SEARCH buttons on the CD player to scan through the track numbers.

Press the ⏮ button to find tracks with decreasing numbers, and the ⏭ button to find tracks with increasing numbers.

- If you press the SEARCH buttons when the CD Player is in the pause/stop mode, you will find the track you selected.
  You can restart playback by pressing the PLAY/PAUSE button.
- If you press the SEARCH button continuously during playback, the CD will advance rapidly in the direction of the button.

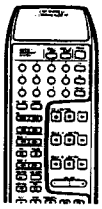
Using the Remote Controller to Select a Track

There are three ways to search for a track with the remote controller:

Numeric keypad

AUTO SEARCH buttons ⏮ or ⏭

MANUAL SEARCH buttons ◀◀ or ▶▶



Using the Numeric Keypad

1. **Press the CD 10KEY button on the Remote Controller.**
2. **Enter the track's number with the numeric keys.**
   - If the track you want to hear is the 8th track, press the 8 key.
   - If the track you want to hear is the 15th track, press the + 10 key and the 5 key.
   - If the track you want to hear is the 20th track, press the + 10 key and the 10 key.

Using the Auto Search Buttons

Press the Auto Search ⏮ or ⏭ button on the Remote Controller to scan through the track numbers.

Using the Manual Search Buttons

Press the Manual Search ◀◀ or ▶▶ buttons on the Remote Controller to search for a certain part of the track.

Listening Repeatedly

Using the REPEAT button, you can play the entire CD or a selected track repeatedly.

Playing the Entire CD Repeatedly

- During playback, press the REPEAT button once.

REPEAT

The CD will play through the last track and then start over again. It will keep repeating until you cancel the repetition.

Playing a Selected Track Repeatedly

- During playback, press the REPEAT button twice.

REPEAT 1

The current track will play to the end and then start over again. It will keep repeating until you cancel the repetition.

Cancelling Repetition

Press the REPEAT button again.
Each track will play to the end and not repeat.

Displaying the Elapsed and Remaining Playing Time

Using the DISPLAY button, you can display the total time the CD (or current track) has been playing, and the amount of time that remains. This is useful in situations such as recording, when you need to know how long the track or CD has been playing, or the amount of time that remains on the track or CD.

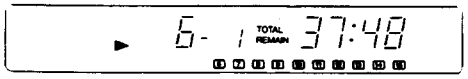
Press the DISPLAY button to show the time you want.

There are four display times:

EACH	The total elapsed playing time since the beginning of playback of the current track
EACH REMAIN	The time remaining until the end of the current track
TOTAL	The total elapsed playing time since the beginning of playback of the CD
TOTAL REMAIN	The time remaining until the end of the CD

The display changes each time you press the DISPLAY button.

For Example:



Display mode:	TOTAL REMAIN
Current track:	6th
Total remaining time:	37 minutes 48 seconds

Programming Your Own Playback Sequence

You can program the CD Player to play back the tracks of a CD in any order.

1. **Press the STOP/CLEAR button on the CD Player.**

   This puts the CD Player in STOP mode and clears existing programs from the memory.

2. **Press the PROGRAM button.**

3. **Press the CD 10KEY button on the Remote Controller.**

4. **Enter the track numbers with the numeric keys in the order you want them played back.**

   - You can program up to 32 tracks.

   If the total time of all the programmed tracks is 100 minutes or more, the display will show "––:––" (since the highest time the display can show is "99:59").

5. **Press the PLAY/PAUSE button on the CD Player, or the CD CONTROL ▷ button on the Remote Controller.**

   Playback begins with the first track in the program.

6. **To add a track to the program during playback, enter the track number with the numeric keys on the Remote Controller.**

   The new track is added to the end of the program.

Checking the Program

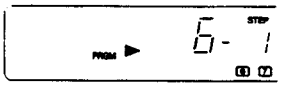
You can check the programmed sequence of playback to determine which tracks will be played in which order.

Note: The program contents cannot be displayed during playback. Press the STOP/CLEAR button if the CD Player is in play mode.

1. **Press the SEARCH button once.**

The first track in the program is displayed, along with its sequence number.

For example:



This display shows that the 6th track will be played first.

2. **Press the SEARCH button repeatedly.**

   The rest of the tracks in the program are displayed, along with their sequence numbers.

Listening to Programmed Tracks Repeatedly

1. **Press the REPEAT button to listen to the programmed sequence of playback repeatedly**

2. **Then press the PLAY/PAUSE button.**

Updating the Program

You can add and delete tracks from the program.

Adding Tracks to the Program

1. **Press the CD 10KEY button on the Remote Controller.**

2. **Enter the track numbers with the numeric keys in the order you want them played back.**

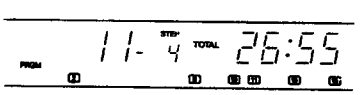
   The track numbers you enter are added to the end of the program.

Deleting Tracks from the Program

Note: The program contents cannot be deleted during playback. Press the STOP/CLEAR button if the CD Player is in play mode.

1. **Press the SEARCH buttons to select the track to be deleted from the program.**

For example:



This display shows that the 11th track is selected to be deleted.

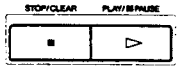
2. **Press the CANCEL button on the Remote Controller.**

- The track being displayed will be deleted.

Updating the Entire Program

You can replace the old program with a new one.

1. **Press the STOP/CLEAR button on the CD Player.**



This clears the programmed sequence of playback from memory.

To clear the program during playback:

- Press the STOP/CLEAR button twice (once to stop, twice to clear the program from memory).

2. **Press the PROGRAM button.**
3. **Press the CD 10KEY button on the Remote Controller.**

Pressing the CD 10KEY button puts the numeric keys in CD mode.

4. **Enter the track numbers with the numeric keys in the order you want them played back.**

Cancelling Programmed Playback

1. **Press the PROGRAM button.**

This puts the CD Player in normal playback mode. The tracks will play back in their regular order.

Playing Tracks at Random

In RANDOM mode, the CD player selects and plays tracks at random.

1. **Press the RANDOM button on the CD player.**

CD player starts playing tracks at random.

2. **To cancel random playback, press the STOP/CLEAR button.**

- When all tracks in the disc are played once, the random playback ends.
- If you set the CD player to the REPEAT mode by pressing the REPEAT button, even after all tracks have been played once, the CD player will again select and play tracks at random to continue the random playback.

Using the AUTO POWER OFF Function

The power can be automatically turned off when the CD playback is completed.

1. **Press the AUTO POWER OFF button on the CD player.**

The indicator light will go on.

2. **Press the PLAY/PAUSE button on the CD player or the CD CONTROL ▷ button on the Remote Controller.**

The power goes off automatically when the CD playback is completed.

Using the Tape Deck

The tape deck has an Auto Tape Select feature, which can tell the difference between various types of cassette tape. It can distinguish between Normal (Type I), CrO_2 — High Position (Type II), and Metal (Type IV).

Playing a Tape

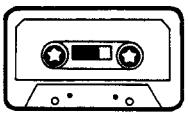
1. **Press the EJECT button to open the cassette holder.**
2. **Insert a cassette and shut the cassette holder.**
3. **If the tape was recorded with Dolby noise reduction, use the DOLBY NR switch.**

Set the switch to the same mode as the tape was recorded in.

4. **Start playback by either of the following methods:**

- Press the ◁ ▷ button.

Press the ▷ button if the tape is wound mostly on the left side.



Press the ◁ button if the tape is wound mostly on the right side.

- Press the TAPE button on the Amplifier.

Note: When cassettes are in both decks A and B, deck B starts first.

Stopping Playback and Ejecting the Tape

1. **Press the STOP button on the tape deck.**

2. **Press the EJECT button to open and remove the tape from the cassette holder.**
3. **Shut the cassette holder.**

Note: If the system is turned off while a tape is playing, you may not be able to eject the tape. You will need to turn the system back on and press the EJECT button to open the cassette holder.

Stopping and Restarting Playback

1. **Press the PAUSE button on the tape deck.**

Playback of the tape in deck B stops temporarily.

Note: The PAUSE button only applies to deck B.

2. **Press the ◁ or ▷ button.**

This restarts playback of the tape in deck B.

Changing the Playback Direction

1. **To change the playback direction during playback, press the ◁ or ▷ button.**

The other side of the tape will now play.

2. **To change the playback direction without starting playback, press the ◁ or ▷ button while also pressing the stop ■ button.**

This allows you to set the tape direction for a timed recording.

Fast-Winding the Tape

Press the ◂◂ or ▸▸ buttons on the Tape Deck to advance the tape rapidly in the direction of the arrows.

Listening to Tape Continuously

You can set the tape deck up to play both sides of the tapes in decks A and B repeatedly.

1. **Insert cassettes into decks A and B.**
2. **Set the REV.MODE switch to ⇆ (auto reverse) position.**

non reverse ←  →auto reverse

- The tape deck will be placed in auto reverse mode, which means that it will play all of one side of the tape and then all of the other side.

3. **Press the ◁ or ▷ button of the deck to be started first.**

- Now both sides of both tapes will play repeatedly.
- After playback in reverse direction ends, the playing deck (A or B) will be switched to the other deck.
- If the tape deck is not placed in auto reverse mode, only one side of the tapes in decks A and B will play continuously.
- If you press the TAPE button on the Amplifier, deck B will start first.

Skipping Blanks

When there is a blank of 10 seconds or more, the tape skips forward to the beginning of the next track.

1. **Press the BLANK SKIP button on the tape deck.**

2. **Press the ◁ or ▷ button.**

Blank Skip playback starts.

The BLANK SKIP function is not effective:
- When the track contains an area of low sound level.
- When the blank between tracks is short.
- When there is noise, for example, a hum between tracks.

Music Scanning

The music scan function will detect the blank segments between tracks. The blank should be about 4 seconds long for the music scan to be effective.

You can locate the beginning of the current track or next track quickly by pressing the playback button and the fast-winding button simultaneously.

Searching for Beginning of the Current Track

- If the tape is travelling in the forward direction, press the ◀◀ fast-winding button while simultaneously pressing the ▷ playback button.
- If the tape is travelling in the reverse direction, press the ▶▶ fast-winding button while simultaneously pressing the ◁ playback button.

Searching for Beginning of the Next Track

- If the tape is travelling in the forward direction, press the ▶▶ fast-winding button while simultaneously pressing the ▷ playback button.
- If the tape is travelling in the reverse direction, press the ◀◀ fast-winding button while simultaneously pressing the ◁ playback button.

Note: The deck that is playing will stop if the music scan function is used on the other deck.

The music scan function is not effective:
- When the track being scanned contains an area of low sound level.
- When the blank between tracks is short.
- When there is noise, for example, a hum between tracks.

Recording a Tape

The recording system uses Dolby HX PRO to improve the high-frequency characteristic and to reduce level fluctuations at low frequencies. You will enjoy dynamic recording ranging from low through high frequencies.

Note: No switch operation or operation at playback is needed.

Recording Notes:

- Deck A is used for playback only, and deck B is used for both recording and playback.
- To reduce hiss, use the Dolby noise reduction system. Set the DOLBY NR switch to B or C.

  B: Popular noise reduction
  C: Highly effective noise reduction

- To dub both sides of tape, set the REV MODE switch to the auto reverse position (⇄), and start dubbing in the forward direction (▷) for both decks A and B.
- The recording level is set automatically.
- If the small tabs on cassette tapes to prevent accidental erasure have been removed, the contents of the tape cannot be recorded or erased over. To record or erase, cover the holes with adhesive tape. (The tab in the upper left corner is the tab for the side facing you, and the other tab is for the opposite side.)
- If you are recording an AM broadcast and you hear interference, move the BEAT CUT switch on the back of the stereo from Position 1 (the normal mode) to Position 2.

Recording from Various Sources

1. **Insert a cassette for recording into deck B.**
2. **Select the source you are recording from TAPE (Deck A), TUNER, CD, VCR/DAT, PHONO.**
3. **Press the Pause ❚❚ button on the Tape Deck while simultaneously pressing the REC/REC MUTE button.**

This puts the deck B in REC/PAUSE mode.

4. **Start the source to be recorded.**
5. **Press the Play ◁ or ▷ button on deck B to start recording.**

To record on both sides of tape, start recording in the forward (▷) direction.

6. **To stop recording, press the Stop ■ button.**
7. **To stop recording temporarily, press the Pause ❚❚ button on deck B.** To restart recording again, press the Play button ◁ or ▷

Dubbing a Tape

Normal-Speed Dubbing

1. **Insert the cassette for playback into deck A and the cassette for recording into deck B.**
   - The type of tape (Normal, CrO_2, or Metal) used for recording must be the same as that used for playback.
   - To dub a tape which was recorded with Dolby noise reduction, set the DOLBY NR switch on the Tape Deck and the SEA button on the Amplifier to the OFF position.
2. **Press the Pause ❚❚ button while simultaneously pressing the REC/REC MUTE button on deck B.**

   This places deck B in REC/PAUSE mode.
3. **Press the Play button ◁ or ▷ (depending on which side of the tape you want to record from) on deck A.**
4. **Press the Play button ◁ or ▷ (depending on which side of the tape you want to record onto) on deck B.**

The tape-to-tape recording starts.

Note: You cannot listen to another source during normal-speed dubbing.

- To stop normal-speed dubbing before the end of either the playback or record tape, press the Stop ■ buttons on decks A and B.

High-Speed Dubbing

1. **Insert the cassette for playback into deck A and the cassette for recording into deck B.**

   ■ To change the playback direction of deck A, hold down the Stop □ button and press the ◁ or ▷ button.

2. **Press the HIGH SPEED DUBBING button on the Tape Deck.**

   ■ The high-speed tape-to-tape recording starts.

   Note: You can listen to another source while high-speed dubbing is in progress.

   ■ To stop high-speed dubbing before reaching the end of either the playback or record tape, press the Stop ■ button on deck B.

   Note: If a nearby television is on during high-speed dubbing, a beeping noise may be recorded onto the record tape. Turn off the television or move it farther away.

3. **Press the Stop ■ button on deck A when you hear the end of a track to record from many different tapes (for example, to create a "Greatest Hits" tape)**

   Deck A stops playback, and deck B automatically creates about a 4 second blank, then pauses.

   Note: If you don't want this blank, press the PAUSE ❚❚ button on deck B before pressing the Stop ■ button.

4. **Put another tape into deck A.**

5. **Press the HIGH SPEED DUBBING button on the Tape Deck.**

   The high-speed dubbing restarts.

6. **To record tracks from other tapes, repeat steps 3 - 5.**

   ■ The SEA Function is not effective during high-speed dubbing.

   Note: It may be unlawful to record or playback copyrighted material without the consent of the copyright owner.

Erasing a Tape

1. **Insert the tape to be erased into deck B.**

   ■ To erase music on both sides, set the REV.MODE switch to the auto reverse position.

2. **Press the Pause ❚❚ button while simultaneously pressing the REC/REC MUTE button.**

   This puts the deck in REC/PAUSE mode.

3. **Press the TAPE button on the Amplifier.**

4. **Press the ◁ or ▷ button (depending on which side of the tape you want to erase) on deck B.**

   The erasure of the tape begins.

Direct Recording from the CD Player

Direct recording permits a tapedeck to start recording automatically in synchronism with a CD player.

1. **Insert the cassette for recording into deck B.**

   ■ Set the REV.MODE switch to Auto reverse ⇆ position if you want to record on both sides of the cassette.

2. **Put a CD in the CD Player.**

3. **Press the CD DIRECT REC button on the Tape Deck.**

   ■ The CD Player and the Tape Deck are activated, and recording begins with the first track of the CD.
   ■ To stop direct recording, press the Stop ■ button on deck B or the STOP/CLEAR button on the CD Player.

4. **To fade out the CD gradually at the end of the tape, press the FADE button on the CD Player.**

   The volume level of the last track on the tape is lowered gradually to 0. This makes a nice ending to your tape and prevents an abrupt cut-off of music if the tape ends before the CD.

5. **To cancel the fade-out function during recording, press the FADE button again on the CD Player.**

   The fade-out function operates in both forward and reverse directions.

   ■ When the end of the tape is reached, the tape is rewound to the beginning of the last track.
   ■ The last track is played back again from the CD Player and recorded again on the tape. This time the sound level is reduced gradually at the end.

Recording CD Tracks in Auto-Edit Mode

In Auto-Edit mode, tracks from the CD will automatically be selected to determine which tracks should go on side A of the tape and which should go on side B.

The selection is based on the lengths of the tracks and the length of the tape. This ensures a proper "fit" of the tracks recorded on the tape. It prevents a track from being cut off when the end of the tape is reached.

1. **Insert the cassette for recording in deck B.**
   - Set the REV. MODE switch to the Auto reverse position if you want to record on both sides of the cassette.
2. **Put the CD in the CD Player.**
3. **Press the STOP/CLEAR button on the CD Player.**
4. **Press the A. EDIT button on the CD Player to tell the system the length of the tape in the Tape Deck.**

   - The tape length most suitable for CD recording is displayed first.
   - Each time the A.EDIT button is pressed, the next standard tape length blinks, in this order:

     ▶C46▶C54▶C60▶C74▶C90▶ (back to the beginning)

   - You can also enter a non-standard tape length from the Remote Controller using the numeric keys.

   For example: To enter a tape length of 50 minutes, press the CD 10KEY button on the Remote Controller, then press the +10 key four times and the 10 key once.

5. **Press the SIDE A/B button on the Remote Controller.**
   - The CD Player calculates which tracks should be placed on side A and which should be placed on side B, based on the lengths of the tracks and the length of the tape.
   - If you do not press the SIDE A/B button, the CD Player automatically decides which tracks should be placed on sides A and B about 4 seconds after the A. EDIT button is pressed.

   Note: Up to 16 tracks can be allocated for each side of the cassette.

6. **Press the CD DIRECT REC button on the Tape Deck.**

   - The tape is automatically rewound to the beginning of side A, and then recording begins.
   - When the Tape Deck is set in the auto reverse mode, after the last track is recorded on side A, the tape deck high-speed-erases to the end of side A. Then it changes direction to side B and begins recording the remaining tracks.
   - To stop recording, press the Stop ■ button on deck B, or press the STOP/CLEAR button on the CD Player.

Note: During recording in the Auto-Edit Mode, do not operate the CD Player.

Recording CD Tracks in Programmed-Edit Mode

In Programmed-Edit Mode, you decide which tracks from the CD will be recorded, and in what order.

1. **Insert the cassette for recording in deck B.**
   - Set the REV. MODE switch to the Auto reverse position if you want to record on both sides of the cassette.
2. **Put the CD in the CD Player.**
3. **Press the STOP/CLEAR button on the CD Player.**
4. **Press the PROG. EDIT button on the Remote Controller to tell the system the length of the tape in the Tape Deck.**

   - Each time the PROG. EDIT button is pressed, the next standard tape length blinks, in this order:

     ▶ C46 ▶ C54 ▶ C60 ▶ C74 ▶ C90 ▶ (back to the beginning)

   - You can enter a non-standard tape length from the Remote Controller using the numeric keys.

   For example: To enter a tape length of 50 minutes, press the CD 10KEY button on the Remote Controller. Then press the +10 key four times and the 10 key once.

5. **Press the SIDE A/B button on the Remote Controller.**

   - This tells the system that you will be choosing tracks to be recorded on side A of the tape.
   - The length of time for one side of the tape is displayed. This is half of the total tape length. The total time for the tracks you choose for each side cannot exceed this time.
   - If you do not press the SIDE A/B button, side A is automatically selected.

6. **Press the CD 10KEY button on the Remote Controller.**
7. **Enter the numbers of the tracks you want recorded on one side of the tape.**
   - Tracks on a CD assigned numbers 32 or greater cannot be entered in the program.
   - If the length of a track exceeds the remaining tape length, the time indication blinks on the display. Choose a different track number.
   - To delete a track from the program, specify the track with the AUTO SEARCH buttons on the Remote Controller. Then press the CANCEL button on the Remote Controller.
8. **If you also want to record on the other side of the tape, press the SIDE A/B button on the Remote Controller and repeat step 7.**
9. **Press the CD DIRECT REC button on the Tape Deck.**

- The tape is automatically rewound to the beginning of side A, and then recording begins.
- When the Tape Deck is set in auto reverse mode, after the last track is recorded on side A, the tape deck high-speed-erases to the end of side A. Then it changes direction to side B and begins recording the remaining tracks.
- To stop recording, press the STOP button on deck B, or press the STOP/CLEAR button on the CD Player.

Note: The program cannot be edited during recording. To change the program, press the STOP/CLEAR button on the CD Player and begin with step 4 of this procedure.

Note: During recording in the Programmed-Edit Mode, do not operate the CD Player.

Recording with the SEA Function

The SEA Function is used to alter the tone of the source by increasing or decreasing the levels of selected frequency ranges.

You can use this function to control the way the tracks from the CD will sound when they are recorded on the tape.

1. **Insert the cassette for recording in deck B.**
2. **Press the SEA button on the Amplifier.**
   - The indicator light will go on.
   - To create the desired sound, see "Controlling Sound with the SEA Function" on page 9.
3. **Press the ◁ or ▷ button on the Tape Deck while holding down the REC/REC MUTE button.**

   Recording starts.

SEA Function Notes

- The SEA Function cannot be used during high-speed dubbing.
- If the source you are recording from is a cassette in deck A that was created using Dolby noise reduction, the noise reduction effect is lost when you dub using the SEA Function.
- To keep the noise reduction effect of the cassette in deck A, use either of these methods:
  - High-speed dubbing.
  - Normal speed dubbing, with the SEA Function off and the DOLBY NR button set to OFF.
- When LEARNING CSRP is ON, do not change the volume level during recording because the loudness feature will cause the SEA settings to be altered.

Creating a Blank During Recording

Use the Record Muting function when you do not want to record a section of the source.

1. **Press the REC/REC MUTE button on the Tape Deck at the beginning of the section you don't want to record.**

   A blank of about 4 seconds is created on the cassette, and then the deck pauses.
2. **To start recording again, press the ◁ or ▷ button.**
   - To create a blank of more than 4 seconds, hold down the REC/REC MUTE button. When you release this button, the deck pauses.
   - When the source you are recording from is the CD Player and the CD DIRECT REC button is used, the REC/REC MUTE button will not function.

Recording with the Timer

This compact component system can be set up to record a tape automatically. This is especially useful for recording broadcasts when you are not around, or late at night when you are asleep.

1. **Insert a cassette for recording into deck B.**
2. **Set the timer, by following the steps in "Setting the Timers" on page 18.**
3. **Select one of the following sources:**

TUNER TIMER REC	Records TUNER preset stations
— — TIMER REC	Records from the source selected before turning off the system

Using the Tuner

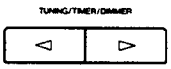
Listening to Broadcasts

The Tuner can receive FM and AM broadcasts. Stations can be tuned in manually, automatically, or from preset memory storage.

Manual Tuning

1. **Select the broadcast band you want to tune in by pressing the FM or AM button on the Tuner.**

2. **Press the TUNING/TIMER/DIMMER button (◁ or ▷) to tune in a station.**



3. **Hold down the TUNING/TIMER/DIMMER button to change the frequency rapidly, then tap the button to set the frequency precisely.**

Automatic Tuning

1. **Select the broadcast band you want to tune in by pressing the FM or AM button on the Tuner.**
2. **Hold down the TUNING/TIMER/DIMMER button (◁ or ▷) for a moment, and then release the button.**

   ■ When a station is tuned in, the TUNED indicator lights up.

   Note: The Tuner will tune in the nearest strong station.

Presetting Stations in Memory

You can store up to 40 of your favorite radio stations (FM and AM) in memory, giving you quick, easy access to the stations.

1. **Select a band by pressing either the FM or AM button on the Tuner.**
2. **Press the TUNING/TIMER/DIMMER button (◁ or ▷) to tune in a station.**
3. **Press the MEMORY button on the Tuner.**

The "MEMORY" indicator on the Tuner display blinks for 5 seconds.

4. **Press the PRESET button (◀ or ▶) on the Tuner to assign a number (1-40) to the station, or enter a number (1-40) with the Remote Controller's numeric keypad.**

   Example:
   To enter 7, press "7".
   To enter 17, press "+10", then "7".
   To enter 20, press "+10", then "10".

   ■ To enter a number with the numeric keypad, you must press the FM or AM button on the remote controller first.
   ■ If the "MEMORY" indicator has stopped blinking, press the MEMORY button again and repeat step 4.
   ■ If the preset number you choose already has a station assigned to it, the old station will be replaced by the new one.

5. **Press the MEMORY button again.**
   This stores the station in memory, with the preset number (1-40) you chose in step 4.
6. **Repeat steps 1-5 for each station you want to store in memory with a preset number.**

   Caution! If the system is unplugged or if a power failure occurs, the preset stations stored in memory may be lost.

Cancelling Preset Stations

1. **Press the CANCEL button on the Tuner.**

The "CANCEL" light on the Tuner display blinks for 5 seconds.

2. **Press the PRESET button (◀ or ▶) on the Tuner to select the preset station you want to cancel.**

   If the "CANCEL" light has stopped blinking, press the CANCEL button again and repeat step 2.

3. **Press the CANCEL button again.**

   The preset station will be cancelled.

Tuning in Preset Stations

■ Press the PRESET button (◀ or ▶) on the Tuner to select the preset station you want. The preset station numbers are displayed sequentially each time you press the PRESET button.
■ You can also select a station by entering its preset number on the Remote Controller's numeric keypad.

FM Reception Modes

There are two FM reception modes: AUTO and MONO.

AUTO: Stations are tuned in with either STEREO or MONO, depending on the strength of the FM signal.
MONO: Stations are tuned in with MONO only. This will reduce interference noise of weak stations and make the reception sound better.

1. **Press the FM MODE/MUTE button on the Tuner to switch between the AUTO and MONO reception modes.**

2. **Press the FM MODE/MUTE button on the Tuner to the AUTO mode to receive the station in stereo.**

   ■ If a stereo broadcast is received when the FM band is selected, the "STEREO" light will be displayed on the Tuner.
   ■ If the FM Reception Mode is MONO, the "STEREO" light will not be displayed.

Using the Timers

Setting the Clock

The clock will be displayed even when the system is turned off. Pressing the TUNING/TIMER/DIMMER buttons (◁ or ▷) will switch between two brightness levels for the clock.

1. **Press the CLOCK ADJUST button on the Tuner.**

The hours digits blink.

2. **Press the TUNING/TIMER/DIMMER button (◁ or ▷) to set the hours digit.**

- Press the ▷ button to increase the hour, and press the ◁ button to decrease the hours.
- To enter a new hour digit, press the CANCEL button and repeat step 2.

3. **Press the MEMORY button on the Tuner.**

This sets the hour portion of the time.

The minutes digits will blink.

4. **Press the TUNING/TIMER/DIMMER button (◁ or ▷) to set the minutes digit.**

- It's a good idea to set the minutes digits one minute ahead. Then you can start the clock when it reaches the set time exactly (according to the correct time from the TV, radio, or telephone).
- To enter a new minute digit, press the CANCEL button and repeat step 4.

5. **Press the MEMORY button.**

The clock starts as soon as you press the MEMORY button.

Caution: If there is a power failure, or if you unplug the stereo, the clock time will be lost. Repeat steps 1-5 when power is restored.

- Use the TUNING/TIMER/DIMMER buttons to change luminosity of time display by two steps under STANDBY status.

Setting the Timers

This system has three timers **(TIMER 1, TIMER 2, DAILY)** that are used to turn the system on and off automatically:

With the timers you can make tape recordings of broadcasts, CD's, or tapes when you're not around. You can also play these music sources at specified times without recording them.

- Use TIMER1 and TIMER2 to record a radio broadcast when you're not home, or late at night when you're asleep.
- Use the DAILY timer to record a broadcast that occurs at the same time every day.
- The procedure for setting TIMER1, TIMER2, and the DAILY timer is the same. You need to tell the system:

— The name of the timer (TIMER1, TIMER2, or DAILY).
— The time the timer should turn the system on.
— The time the timer should turn the system off.
— The source the timer should turn on (Tuner, CD, or Tape).
— The volume level that should be used during recording or playback.

Note: The clock must be set to the correct time for the timers to be effective.

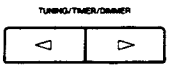
Caution! Do not operate the remote controller when you are programming the timer.

Choosing a Timer

Press the TIMER1, TIMER2, or DAILY button on the Tuner to select a timer. This puts the system in the Timer Setting mode. The information that the system expects next will blink on the display.

Setting the Start Time

1. **Press the TUNING/TIMER/DIMMER buttons to set the hour that the system will turn on.**



The ◁ button makes the hour number decrease, and the ▷ button makes the hour number increase.

2. **Press the MEMORY button.**

This stores the hour portion of the start-time in memory.

3. **Press the TUNING/TIMER/DIMMER buttons to set the minute.**

4. **Press the MEMORY button.**
This stores the minute portion of the start-time in memory.

Setting the Stop Time

1. **Press the TUNING/TIMER/DIMMER buttons to set the hour that the system will turn off.**
2. **Press the MEMORY button.**

   This stores the hour portion of the stop-time in memory.
3. **Press the TUNING/TIMER/DIMMER buttons to set the minute.**
4. **Press the MEMORY button.**

   This stores the minute portion of the stop time in memory.

Selecting the Source

1. **Press the TUNING/TIMER/DIMMER button to select a source.**

   Repeatedly pressing the ▷ button displays the sources in the following order:

Display	What it means
-- -- --	Plays from whichever source was used just before turning off the system
TUNER	Plays FM or AM broadcast
TUNER TIMER REC	Records FM or AM broadcast
CD	Plays a CD
TAPE	Plays a tape
-- --TIMER REC	Records from whichever source was used just before turning off the system

Note: If you choose an FM or AM radio station as the source, select the preset station by pressing the PRESET button on the Tuner.

2. **Press the MEMORY button.**
   This stores the source to play or record in memory.

Setting the Volume

1. **Press the TUNING/TIMER/DIMMER button to select a volume level.**
   Repeatedly pressing the ▷ button displays the volume levels in the following order:

Display	What It Means
VOL -- --	Volume set to the level used before shut the power off.
VOL -- 0	Volume off
VOL -- A	Volume barely on
VOL -- B	Volume at 1/4 power
VOL -- C	Volume at 1/3 power

2. **Press the MEMORY button.**

   This stores the volume level for timed playback or recording in memory.

Starting the Timer

Press the Timer button to start the timer. The timer you chose should light on the display.

Note: If the timer light does not light, the timer was not set properly, and you need to set the start time again.
To change your selection, press the CANCEL button and enter a new value.

Turning the System Off

Press the POWER button on the Amplifier to turn the system off.

- The system is now programmed to turn on at the preset start-time, and play or record until the stop-time.
- It will record or play the preset source at the preset volume level until the stop-time is reached.
- If you turn the system on before the start-time, the timer will still operate as programmed at the start-time.

Resetting the Timers

To reset a timer, press the button (TIMER1, TIMER2, or DAILY) on the Tuner twice. Now the timer is set again and will use the same start-time, stop-time, source, and volume level as before.

Setting the Wake-Up and Sleep Timers

You can set a timer so it turns on to wake you up or turns off when you go to sleep.

Setting the Wake-Up Timer

The wake-up timer serves as an alarm clock. It turns the system on after a programmed time lapse and plays the source that was used before the system was turned off. You can set a wake-up time from between 5 minutes and 12 hours.

1. **Press the POWER switch on the Amplifier so it is off.**
2. **Press the WAKE UP/SLEEP button on the Tuner.**

   This tells the system that you are going to set the wake-up time.
3. **Press the WAKE UP/SLEEP button repeatedly until the desired wake-up time appears.**

   Each time you press the WAKE UP/SLEEP button, the wake-up time lapse changes in the following order:

   ▶0:05▶0:10▶0:15▶0:30▶0:45▶1:00▶1:30▶2:00▶3:00▶ (every hour) ▶12:00▶ (back to the beginning)

   - If you make a mistake, press the CANCEL button on the Tuner and enter a new wake-up time with the WAKE UP/SLEEP button.

   The system will now turn on after this time lapse.

   - The wake-up timer has priority over TIMER1, TIMER2, and the DAILY timer.
     This means that if the start-time for one of the timers occurs before the wake-up time, the system will wait until the wake-up time to turn on.

Note: If CD is the source that will be used, playback begins with the first track.

Setting the Sleep Timer

The sleep timer is used to turn off the system after a specified time lapse. With this timer you can fall asleep listening to music, knowing that the system will shut off automatically and not stay on all night. You can set the sleep timer to turn the system off from between 5 minutes and 2 hours

1. **Press the POWER switch on the Amplifier so it is on.**
2. **Start the source you want to listen to.**
3. **Press the WAKE UP/SLEEP button on the Tuner.**

This tells the system that you are going to set the sleep time.

4. **Press the WAKE UP/SLEEP button repeatedly until the desired sleep time appears.**

Each time you press the WAKE UP/SLEEP button, the sleep time lapse changes in the following order:

▶0:05▶0:10▶0:15▶0:30▶0:45▶1:00▶1:15▶1:30▶1:45▶2:00▶ (back to the beginning)

- If you make a mistake, press the CANCEL button on the Tuner and enter a new sleep time with the WAKE UP/SLEEP button.

  The system will now turn off after this time lapse.

- The sleep timer has priority over TIMER1, TIMER2, and the DAILY timer.

  This means that if the stop-time for one of the timers occurs before the sleep time, the system will wait until the sleep time before turning itself off.

Checking the Remaining Time

After setting the wake-up or sleep timer, you can check the time remaining until the system turns on (wake-up time) or shuts off (sleep time).

Press the WAKE UP/SLEEP button.

The remaining time is displayed for 5 seconds. Then the clock time appears again.

Adding More Time

If you want more time before the wake-up timer turns the system on (or the sleep timer turns the system off), follow these steps:

1. **Press the WAKE UP/SLEEP button.**

The remaining time is displayed for 5 seconds. Then the clock time appears again.

2. **Press the WAKE UP/SLEEP button again before the clock time is displayed.**

- Keep pressing this button until the desired additional time is reached.

Now the system will wait until the added amount of time until turning on or shutting off.

Cancelling the Time Setting

If you decide you don't want the system to wake you up or play music while you fall asleep, you can turn these timers off.

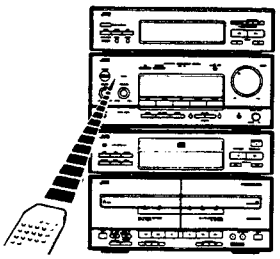
1. **To cancel the wake-up timer, press the POWER button on the Amplifier.**

This turns the power on.

2. **To cancel the sleep timer, press the POWER button on the Amplifier.**

This turns the power off.

Operating the Remote Controller

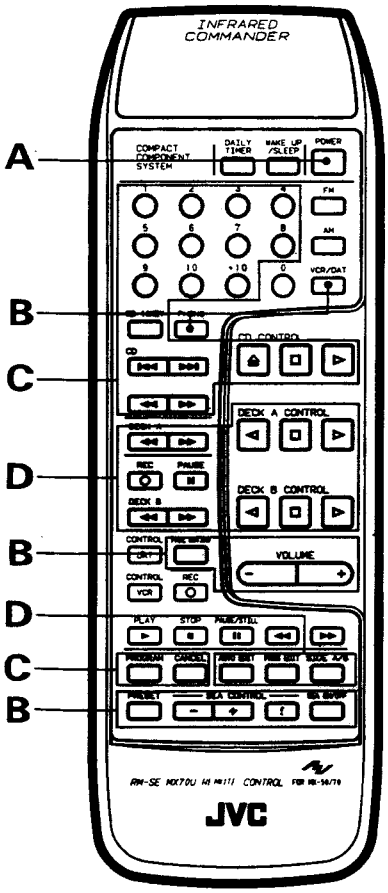


You can use the Remote Controller to operate the system without leaving your chair. You can use it up to a distance of 23 feet.

Point the Remote Controller at the remote sensor on the Amplifier.

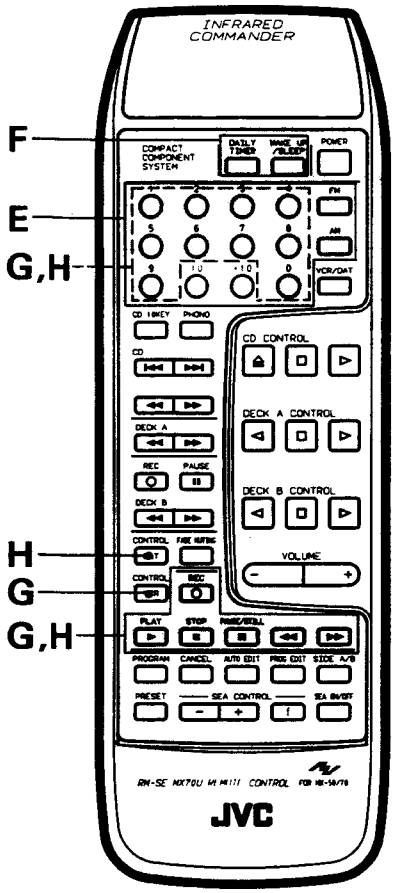
Note: When the Tuner is Selected as the source, and Cd OFF is displayed, only the OPEN/CLOSE and PLAY buttons on the Remote Controller can be used.

To use other buttons on the Remote Controller (for programming and other operations), press the CD button on the Amplifier or the CD PLAY button on the Remote Controller first.



Function	Button(s) To Use
A Turn power on or off	
B **Amplifier**	
Adjust volume level	
Lower volume level gradually to 0	
Listen to VCR or DAT	
Listen to records	
Turning SEA Function on or off	
Selecting a frequency range for the SEA Function	
Setting a SEA level	
Using a SEA pattern	
C **CD Player**	
Open and close the disc tray	
Play a CD	
Stop playback of a CD	
Place numeric keys in CD mode	
Select track number	O ~ O
Scanning through the track numbers	
Search for a certain part of the track	
Program playback order	
Cancelling a program	
D **Tape Deck** (Press buttons corresponding to the deck being used, either deck A or B)	
Play a tape in forward direction	
Play a tape in reverse direction	
Stop playback temporarily (deck B)	
Stop playback	
Fast forwarding or fast rewinding	,
Search for beginning of the track while in forward direction	+
Search for beginning of the track while in reverse direction	+
Recording in forward direction	+
Recording in reverse direction	+
Pausing recording	+
Restarting recording in forward direction	
Restarting recording in reverse direction	
Stopping recording	
Recording from CD in the Auto-Edit mode	O~O,O
Recording from CD in the Programmed-Edit mode	O~O,O

Note: Where '+' is indicated, press and hold the first button illustrated, then press the second.



Function	Button(s) To Use
E Tuner	
Selecting Tuner mode / Selecting a band	
Selecting a preset station	
F Timers	
Setting/resetting the DAILY timer	
Setting the wake-up/sleep timer	
G VCR	
First select VCR mode	
Recording	+
Play a tape	
Stop playback	
Stop recording or playback temporarily	
Rewind the tape	
Fast forwarding	
Select a TV channel	

- When using the remote controller to operate a VCR, point the controller at the VCR.
- The numeric keys may have different functions depending on the JVC model VCR you have. See your VCR's manual for operating instructions.

H DAT	
First select DAT mode	
Recording	+
Play a tape	
Stop playback	
Stop recording or playback temporarily	
Rewind the tape	
Fast forwarding	
Select a track number for playback	

- When using the remote controller to operate a DAT, point the controller at the DAT.
- The numeric keys may have different functions deper.ding on the JVC model DAT you have. See your DAT's manual for operating instructions.

Troubleshooting

Symptom	Possible Cause	Action
No sound is heard.	Speakers are connected incorrectly.	Re-connect speakers (see "Connecting the System Component" on page 6).
Impossible to record.	Tape tabs are broken out.	Cover tabs with adhesive tape.
Interference during broadcast.	Antenna is disconnected. The loop antenna is too close to the system.	Re-connect the antenna securely. Change the position and direction of the loop antenna.
CD sound is discontinuous.	The CD is scratched or stained.	Clean or replace the CD.
The Remote Controller cannot be operated.	There is an obstruction blocking the remote sensor on the amplifier.	Remove the obstruction.
	The batteries of the Remote Controller are weak.	Replace the batteries.
The CD disc tray cannot be operated.	The power plug is disconnected.	Connect the power plug securely.
	The POWER button is set to STANDBY.	Set the POWER button to ON.
The CD does not play.	The CD is in the tray upside down.	Put the CD in the tray with the label side facing up.
Operations are disabled.	The built-in microprocessor may malfunction due to external electrical interference.	Unplug the system, then plug it back in.
The cassette holder cannot be opened.	The system was turned off because the timer was operated while the tape was running.	Turn on the system.

Specifications

Amplifier

Output Power	
SPEAKERS A	**23 watts per channel, min. RMS, both channels driven into 8 ohms, from 40 Hz to 20 kHz, with no more than 0.9% total harmonic distortion.**
SPEAKERS B	27 watts per channel into 6 ohms at 80 Hz with 0.9 % total hormonic distortion.
Total Harmonic Distortion at Half-Rated Power	0.07%
Input Sensitivity/ Impedance (1kHz)	
VCR/DAT	300mV/40k ohms
PHONO	3mV/47k ohms
SEA Center Frequencies	63, 160, 400, 1k, 2.5k, 6.3k, 16kHz
SEA Control Range	± 12dB
Dimensions	10-7/8 × 4-9/16 × 11-1/2 inches (275 × 115 × 291 mm)
Weight	10.8 lbs (4.9 kg)

Compact Disc Player

Dynamic Range	90dB
Signal-to-Noise Ratio	100dB
Wow and Flutter	Unmeasurable
Dimensions	10-7/8 × 2-11/16 × 10-7/16 inches (275 × 68 × 265 mm)
Weight	4.5 lbs (2.0 kg)

POWER SPECIFICATIONS

Area	Line Voltage & Frequency	Power Consumption
Canada	AC 120V~, 60Hz	190 watts, 230VA
U.K.	AC 240V~, 50Hz	365 watts
Australia		
Continental Europe	AC 230V~, 50Hz	160 watts
Other Area	AC 110/127/220/240V~, 50/60Hz	145 watts

Tape Deck

Frequency Response	
Metal:	30 — 17,000Hz
CrO_2:	30 — 16,000Hz
Normal:	30 — 15,000Hz
Wow and Flutter (WRMS)	0.09%
Dimensions	10-7/8 × 4-9/16 × 10-1/2 inches (275 × 115 × 266 mm)
Weight	6.2 lbs (2.8 kg)

Tuner

FM

Tuning range	87.5 MHz — 108.0 MHz
Usable Sensitivity	0.95μV/75 ohms (10.8dBf)
Signal-to-Noise Ratio (IHF-A Weighted/DIN)	**MONO (at 85dBf) 80dB/72dB STEREO (at 85dBf) 73dB/64dB**

AM

Tuning range	530 kHz — 1,710 kHz
Dimensions	10-7/8 × 2-11/16 × 10-7/8 inches (275 × 68 × 275 mm)
Weight	3.1 lbs (1.4 kg)

General

Power Requirements	AC 120 V ∿ 60 Hz
Power Consumption	190 W, 230 VA

Accessories

FM Feeder antenna	1
AM Loop antenna	1
Speaker cable	2
Remote Controller (RM-SEMX70U)	1
Batteries (UM-4/AAA/R03)	2

AM Tuner

Tuning range
MW

Area	Channel Spase	
	9kHz	10kHz
Continental Europe, U.K., Australia	522kHz ~1629kHz	---
Other Area	531kHz ~1602kHz	530kHz ~1600kHz

LW (CA-MX70BK, DX-MX70BK) 144kHz~353kHz
